

# Anisotropic effects and master curves for rubbers with $sp^2$ carbon allotropes: towards light weight materials

Maurizio Galimberti<sup>1</sup>

Silvia Guerra<sup>1</sup>, Giuseppe Infortuna<sup>1</sup>, Vincenzina Barbera<sup>1</sup>, Andrea Bernardi<sup>1</sup>, Giuseppe Mastinu<sup>1</sup>,  
Silvia Agnelli<sup>2</sup>, Stefano Pandini<sup>2</sup>

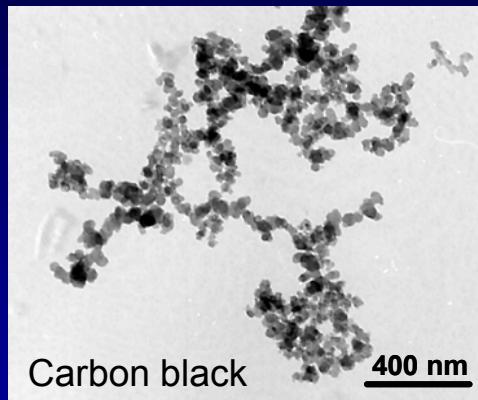

<sup>1</sup>Politecnico di Milano    <sup>2</sup>Università di Brescia

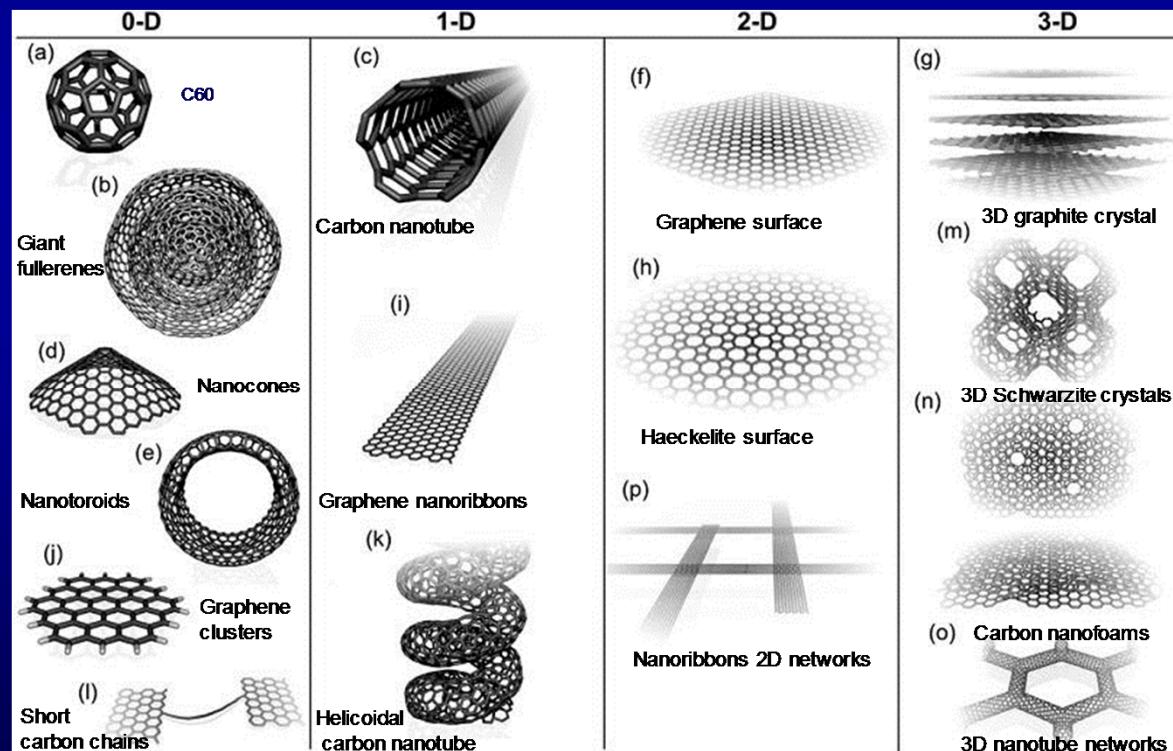

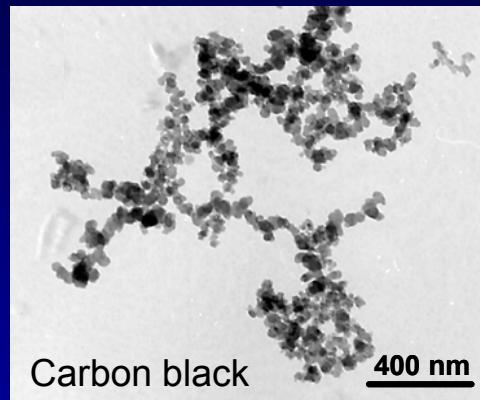

International Elastomer Conference  
192<sup>nd</sup> Technical Meeting ACS Rubber Division  
Cleveland (OH) October 9 - 12, 2017

## sp<sup>2</sup> Carbon allotropes

---

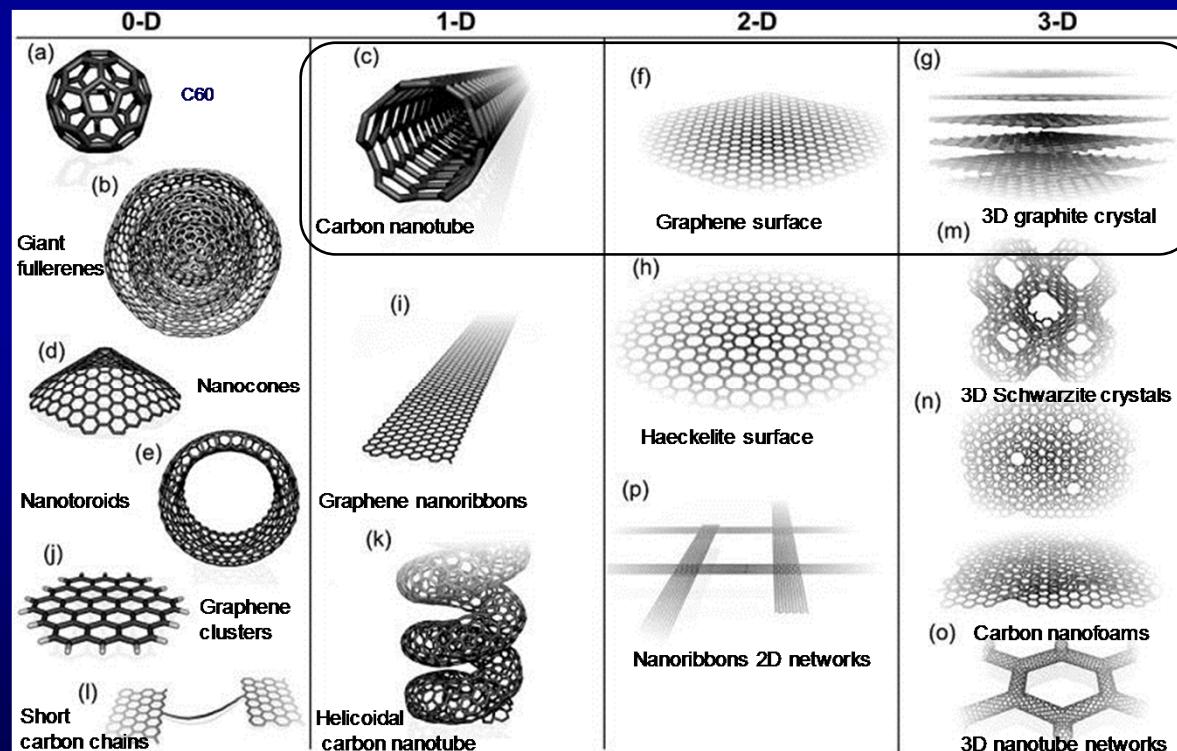

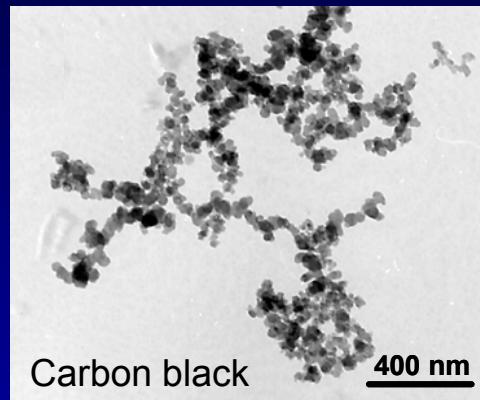

# sp<sup>2</sup> Carbon allotropes

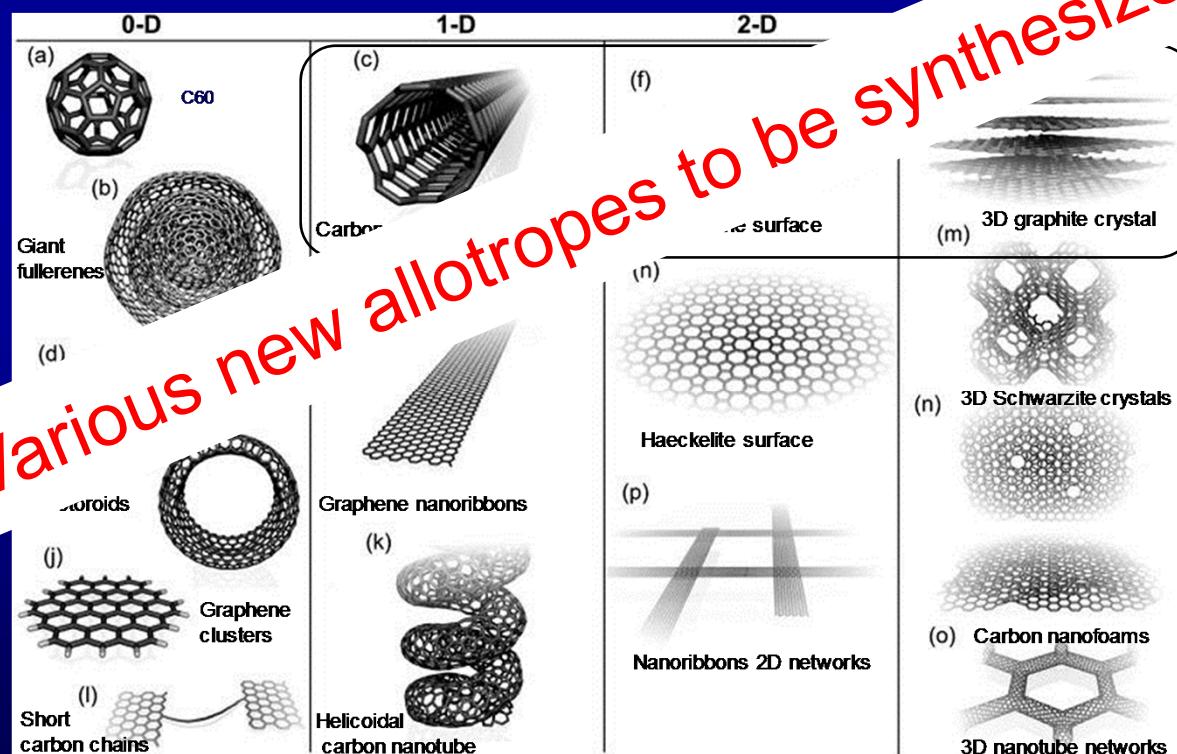

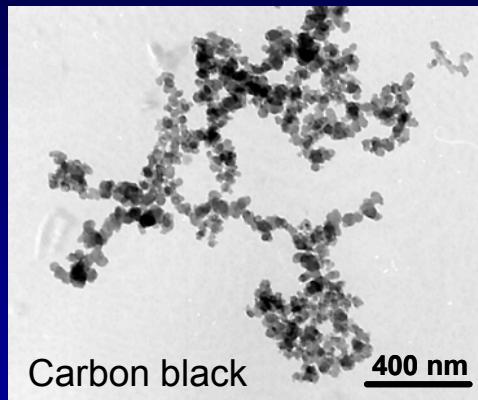

M. Terrones, et al. Nano Today 5 (4) (2010) 351e372.

# sp<sup>2</sup> Carbon allotropes

M. Terrones, et al. Nano Today 5 (4) (2010) 351e372.

# sp<sup>2</sup> Carbon allotropes

M. Terrones, et al. Nano Today 5 (4) (2010) 351e372.

Jin Zhang et al, Carbon 98 (2016) 708e732

## Objectives of the contribution to the Rubber Division Meeting

---

- ☞ Rationalization of  $sp^2$  carbon allotropes, nano and nanostructured, behaviour in rubber compounds: mechanical and electrical properties.

Common correlations?

Prediction of properties and behaviour?

- ☞ Design of rubber materials

# Characterization of sp<sup>2</sup> carbon allotropes

Carbon black

CBN326, N110: from Cabot

CNT

1 - Baytubes C150 P: from Bayer Material Science

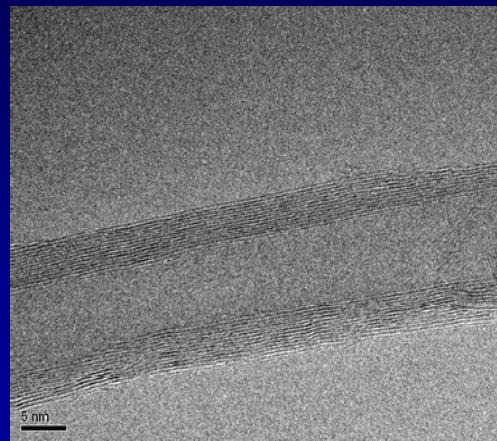

2 - NC7000: from Nanocyl

High surface area graphite (HSAG)

Asbury Synthetic Graphite 8427

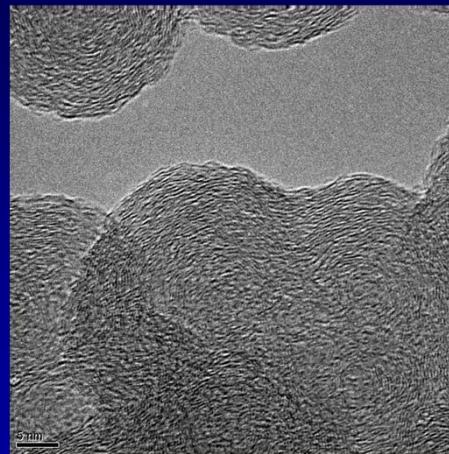

## CNT and CB as the $sp^2$ carbon allotropes. How they look like?

CNT

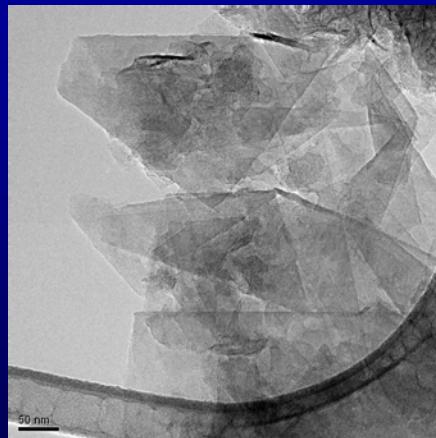

NANOCYL NC7000  
from Nanocyl

CB

CBN326  
from Cabot

HSAG

Asbury Synthetic Graphite 8427

## Carbon nanofillers: main features

Carbon filler	Carbon Purity (%) (TGA)	Surface area (m <sup>2</sup> /g) (BET)	DBP absorption number (ml/100g)	Number of stacked layers (XRD)	Acidic groups (mmol/g) <sup>a</sup> (Boehm titration)	pH
CB N326	98	77	85	5	1.3	5.7 – 9.7
CB N 110	98	137	113	n.d.	n.d.	6.9 – 9.5
CNT - 1	n.d.	200	316	10	n.d.	n.d.
CNT - 2	90	275	n.d.	8	2.0	n.d.
HSAG	99.5	330	162	35	1.1	4.6

<sup>a</sup>carboxy, epoxy, hydroxy groups

M. Galimberti, G. Infortuna, S. Guerra, V. Barbera, S. Agnelli, S. Pandini eXPRESS Polymer Letters, 2017, accepted for publication

S. Musto, V. Barbera, V. Cipolletti, A. Citterio, M. Galimberti, eXPRESS Polymer Letters Vol.11, No.6 (2017) 435–448

# Analysis of mechanical reinforcement

Rubber

IR: SKI3, Nizhnekamskneftekhim Export

S-SBR: Nipol NS 522, Zeon Corporation

## Composites with carbon allotropes, based on IR

### Composites with only one filler (phr)

IR = 100

CNT	0	1.25	2.50	5.00	10.00	15.00	30.00
G	0	1.39	2.78	5.56	11.11	16.67	33.30
CB N326	0	1.25	2.50	5.00	10.00	15.00	30.00

### Fillers with the same volume fraction

Composites crosslinked with dicumyl peroxide: 1.40 phr

M. Galimberti, S. Agnelli, V. Cipolletti, "Progress in Rubber Nanocomposites 1st Edition" ISBN: 9780081004098, Elsevier

S. Agnelli, V. Cipolletti, S. Musto, M. Coombs, L. Conzatti, S. Pandini, T. Riccò, M. Galimberti, eXPRESS Polymer Letters 8(6) (2014) 436

## Composites with carbon allotropes, based on IR

### Composites with hybrid filler systems (phr)

IR = 100

CNT	0	1.25	2.50	5.00	10.00	15.00	30.00
CNT/CB			1.25/ 1.25	2.50/ 2.50	5.00/ 5.00	7.50/ 7.50	15.00/ 15.00
G	0	1.39	2.78	5.56	11.11	16.67	33.30
G/CB	0		1.39/ 1.25	2.78/ 2.50	5.55/ 5.00	8.34/ 7.70	16.65/ 15.00
CB N326	0	1.25	2.50	5.00	10.00	15.00	30.00

Fillers with the same volume fraction

Composites crosslinked with dicumyl peroxide: 1.40 phr

M. Galimberti, S. Agnelli, V. Cipolletti, "Progress in Rubber Nanocomposites 1st Edition" ISBN: 9780081004098, Elsevier

S. Agnelli, V. Cipolletti, S. Musto, M. Coombs, L. Conzatti, S. Pandini, T. Riccò, M. Galimberti, eXPRESS Polymer Letters 8(6) (2014) 436

## Composites with carbon allotropes, based on S-SBR

Composites with hybrid filler systems (phr)

SBR = 100

CNT	0; 1; 2; 3; 4; 5; 6; 6.5; 7.5; 10; 11; 14; 18; 20
CB N326	0; 10; 15; 20; 22; 30; 35; 45; 50; 60
CB N326	10 + CNT: 0 ÷ 14
CB N326	22 + CNT: 0 ÷ 14
CB N326	35 + CNT: 0 ÷ 14

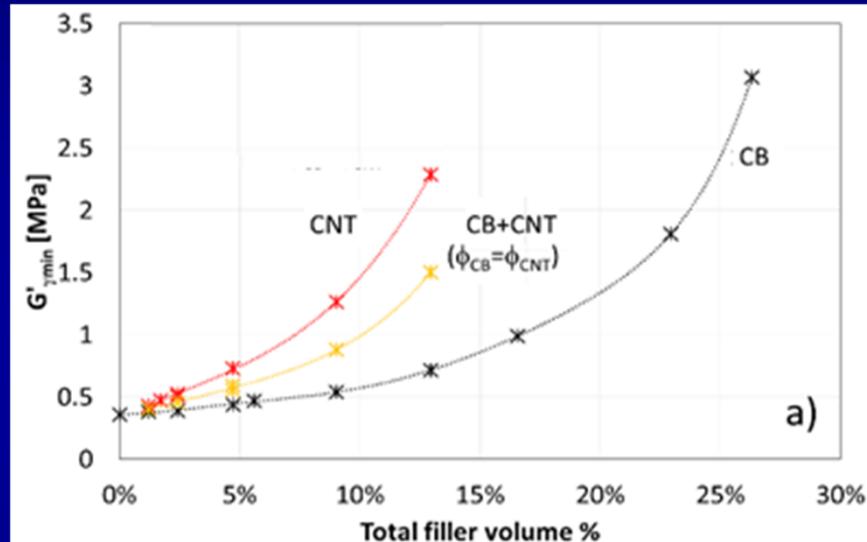

Fillers with the same volume fraction

Composites crosslinked with dicumyl peroxide: 1.40 phr

# Carbon allotropes lead to anisotropic properties of rubber compounds?

CNT

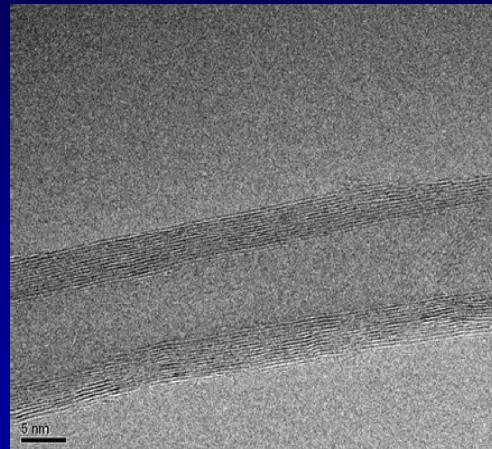

CB

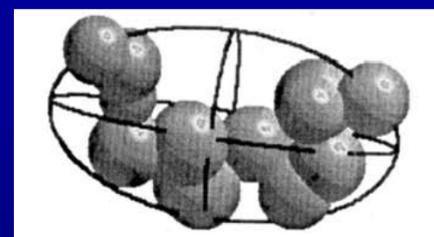

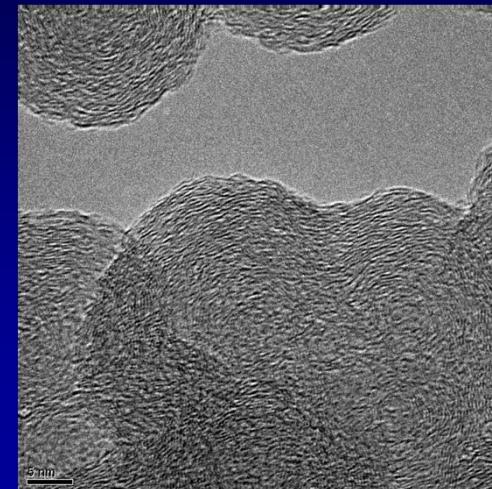

# Carbon allotropes lead to anisotropic properties of rubber compounds?

CNT

CB

N220 aggregate

"Aggregates generally exhibit anisotropy,  
in the form of a reduction of aggregate breadth, or "flatness", in one direction"  
...but even perfectly spherical particles can give anisotropy, if not homogeneously dispersed!

Grueber et al., *Rubber Chemistry and Technology* 67(2):280-287, 1994

# NR based composites with carbon nanofillers

---

## Recipes and preparation

Ingredient	Amount [phr (volume fraction)]			
NR	100	100	100	100
Filler	0	4 (0.02)	15 (0.07)	35 (0.15)
DCUP	1.4	1.4	1.4	1.4

### Fillers

HSAG, CNT, CB: N326

Internal mixer: 50 mL mixing chamber.

50 g NR masticated at 80°C, 1 min, rotors 60 rpm.

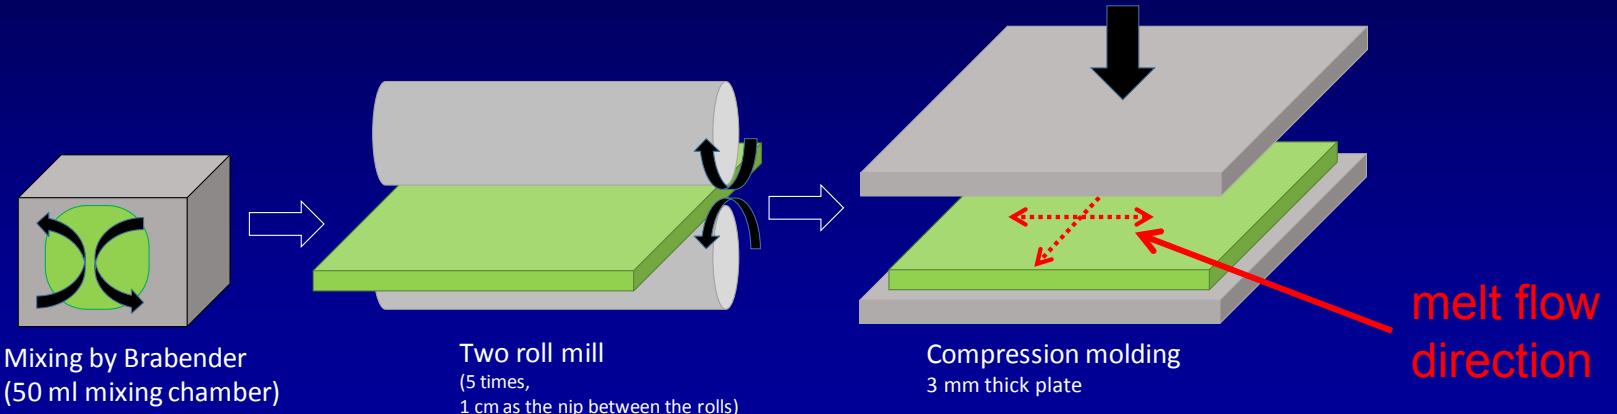

Filler then added.

Mixing performed for further 4 minutes.

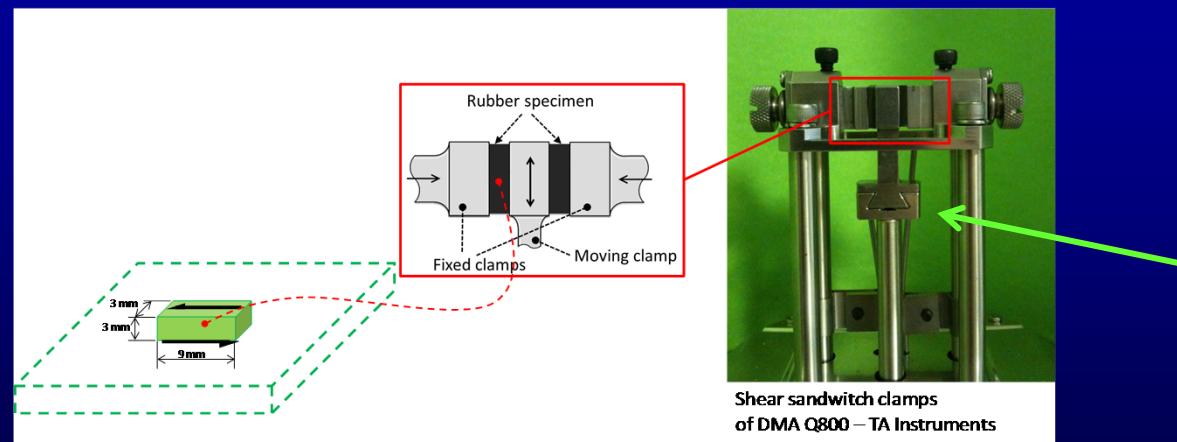

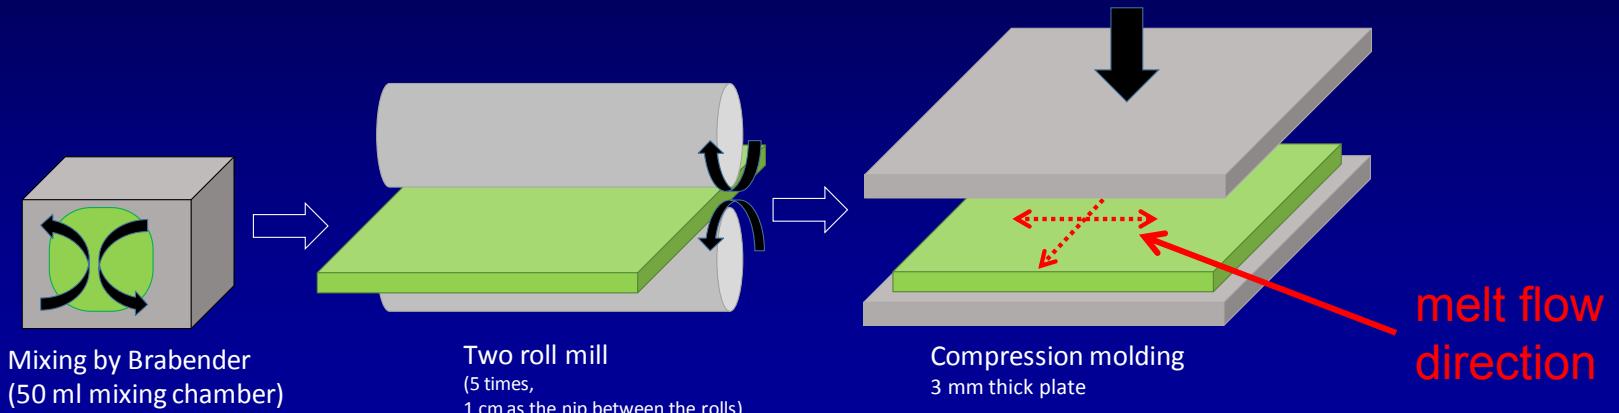

Peroxide added, composite discharged after 2 minutes.

S. Agnelli, S. Pandini, A. Serafini, S. Musto, M. Galimberti *Macromolecules* 2016, 49(22), 8686–8696
