**Preface**

Connectivity and Creativity in times of Conflict - conference proceedings VI  
 Cumulus president's message - Design for Adaptation in Times of Complexity IX

**Track 1**

**Nature positive/design for transformation**

**Editorial** 2  
**Design methodology**  
 Scenario-building through a systemic lens: a new perspective on tools and methods to design for sustainability transitions 4  
 Intimacy/integrity: a framework for thinking about epistemological styles in design activity 9  
 Democratizing design: the development of a 'Design for Do-It-Yourself' framework 15  
 The power of imagination: immersive and experiential counterfactuals to engage with sustainability 20  
 Applying human-centered system design to the development of a tool for service innovation 25  
 Pulse approach: integral design project management to empower transformative processes 30  
 Research on design sketch from different disciplines: overview and directions 35  
 Researching the invisible: troubling qualitative research design through information architecture 41

**Design education**

T+ designers: a case for transdisciplinarity in design higher education by way of a South African case study 46  
 Materiality, commons, and design education 51  
 Representing and shaping regenerative futures: a context-specific approach to art and design education. 58  
 Creative strategies for the learning spaces of the future 62  
 Implementing SDGs in a product design curriculum, or: the value of tap water 67

**Design materialization**

Yutaka: how do we prototype the transformative change towards nature positive designs with soil 72  
 Material experience: the future of material selection for product design 77  
 Discerning modes of design in ecological restoration 82  
 From visual to multisensory: how does intangible cultural heritage of traditional costume self-remodel in digital interactive environment? 87  
 Designing sustainable furniture: guidelines to promote furniture life cycle design 94

**Biophilic approaches in design**

Biophilic design for remote studying environments: analysis of case studies involving a collaboration between ergonomics and environmental psychology 98

Bioreceptive interfaces for biophilic urban resilience 103  
 Artificial nature: possibilities for mycelial composite material design 109  
 Botanical design: exploring the application of parametric plants in furniture 113

**Eco-social transitions**

Systemic Design Oriented Leadership (SDOL) – a co-created play for eco-social leadership development with the methods of Systems Thinking 118  
 Design for transformation: unlock competencies for coping complexity 122  
 Change agents: designers interpreting 'the social' and 'social' interpretations of design 127  
 The changing role of designers in transition processes 132

**Fashion innovations**

Fashion design matter: the role of design in guiding a sustainable transformation in Europe 137  
 Convincing fashion consumers to go green: a brand communication problem? 142  
 Prototype dialogues; re-balancing design thinking through negotiations with fabrics, form and future 148  
 Future fashion: new and ancient systems at the intersection of anthropology, ecology and innovation. 152

**Urban design & citizen inclusion**

Design fiction localised 158  
 Transit Oriented Development used to formulate design guidelines for an improved bus network in Malaysia 163  
 Exploring sustainable ecosystems in the "15-minute" urban living circle—take Shanghai Urban Space Season 2021 as an example 169  
 The Unified Citizen Engagement Approach: a design-oriented framework for involving citizens in the energy transition 174

**Design & digitisation**

Designing for Viral Infection Awareness through PLAYMUTATION 179  
 Gamifying the low impact customer solution design 183  
 Connecting to the future; using serious games and scenario development for responsible design 189  
 About utopias, apocalypses, respawning and zombies and how understanding images of space and time may inform design for sustainable behaviour 194

**Track 2**

**Digital futures/hybrid reality**

**Editorial** 200  
**New crafts and craftspeople**  
 Fashion Craftsmanship 4.0. Learning experience about Industry 4.0 technologies for hybrid digital fashion-tech products, processes, and business model design 202  
 Crafting hybrid workflows for the design of augmented textile artefacts 210

Distance: digital immersive technologies and craft engagement	214	Fantastical reality: designing virtual urban space through extended reality	333
Notions of hybrid craft production: conversations and small-scale experiments in digital fabrication	219	The Metapolis – cities between a ripple and a blur	338
<b>Research through design in the cyber-physical era</b>		Towards data activation and engagement within a smart city	345
Digital synesthesia in product design. Building a vocabulary of physical interactions for a sensible quantified self	223	<b>Technology driven design education</b>	
Digital content that offers experience of listening to crystallized music	228	Teaching design of technologies for collaborative interaction - an emerging pedagogical framework	349
The body can not be thought: the 'disabled body' as a catalyst to develop new paradigms for human-computer integration.	232	A mixed-method approach: virtual reality to co-create future higher education workspaces in a post COVID-19 academic environment	357
Metaphysical Instruments: prototypes for hybrid and live music-making	236	An attempt to integrate AI-based techniques into first year design representation course	363
<b>Redefining the role of design(ers)</b>		<b>Digital fashion</b>	
Virtual skin: co-creating 3D materials with synesthetic artificial intelligence	241	The emperor is naked: deconstructed materiality in fashion NFTs	368
Cabinets of curiosities for the postcolony II: tokens: collections I-V	245	Dematerializing fashion- improving design-led sustainable and hybrid retail experiences via digital twins	372
Speculating futures in an age of nostalgia	250	Fashion archive as a meta medium: unfolding design knowledge through media technologies	379
Computational thinking in design and fabrication for augmented and accessible museums.	254	Fashion and the metaverse: from omni-channel to direct-to-avatar	384
<b>Usability and performance of innovations</b>		<b>Track 3</b>	
Usability and UX evaluation of an online interactive virtual learning environment: a case study of Wales' Virtual Hospital	260	<b>Handle with care/inclusivity</b>	
Design perspectives for the future of work in Industry 5.0 environment: the digital and physical space in Augmented Reality uses	266	<b>Editorial</b>	
Assessing the impact of immersive versus desktop virtual reality shopping experiences in the fashion industry metaverse	271	<b>Design for/as communication</b>	
A pilot study with the Shaper Origin to determine the learning curve of augmented fabrication	276	Encouraging humanitarian assistance in conflict zones through animated public service announcements	392
<b>Design for and with extended reality</b>		The design of an engaging focus group discussion toolkit involving school-aged children following urotherapy	397
Introducing the material experience concept in the metaverse and in virtual environments	280	Inclusive Transformation of age-friendly communities based on digital technology support	402
Balancing authenticity and creativity: A VR system design for assisting in ceramic creation.	287	Taking care of the elderly through the tools of the animated communication design: a useful and ethical imperative	408
What is the furniture in the Metaverse for?	292	Pee poo period. Exploring the intersection between shame, bodily fluids, and sustainable design	413
<b>Design for and with digital fabrication</b>		<b>Design for diverse users</b>	
Craft in the age of robots	299	Feminist value sensitive design of self-tracking technology based on female body data	419
Light it up: designing electronic textile with a light as a design material	304	Spatial "mutual altruism" as a relationship of care for homeless people. How design impacts social re-integration	425
Strategy for knowledge transfer in AM as a hybrid process chain towards a transition from prototyping to commercialisation	309	I'll be there for you: exploring a sense of belonging to enhance student engagement	429
Speculative tinkering on circular design materials through 3D printing	317	Inclusive design in the context of performative gender through product form	433
Flaws as features, new perspectives for developing an additive manufacturing design language	322	Landing the internship: the role of gender in finding ID internships	438
<b>The digital on urban scale</b>		Object as the tool of recovery - Examining material culture of young refugees in Hungary for trauma processing	443
Designing smart product-service systems for smart cities with 5G technology: the Polaris case study	328	The food delivery industry and its lack of care in gender equality: the speculative case of 'GiGi'	448
		Winning at more than a game! A storytelling board game concept to raise awareness about refugees' language barriers	455

**Care(ful) spaces**

Cities for all: co-design interventions on urban features using inclusive technology	461
Separating Covid from non-covid: spatial adaptations in existing hospital buildings	466
Wayfinding is caring	471
Explore vacant public spaces regeneration to facilitate minor's activities and education under inclusive design principles	475
Human-space relationships as narrative processes for inclusivity	480
Urban darkness: human experience of atmosphere and fear	485
Daily social interactions of hawkers as a catalyst to actuating bottom-up spatial justice: experience from Hong Kong	489
The city of care through walkability and proximity. Researching on and with Generation Alpha on urban walkability assessment	494
Hinges, passages and comfort	499
Renewal of urban ecological transportation network based on inclusivity design — Take Sydney's "Livable Green Network" plan as an example	504
How to take care of the Antwerp modernist social housing of Alfons Francken? And how do this housing blocks take care of its changing population?	510
Inclusive innovation: a study of creative furniture design for urban community public space	515

**Co-creating care(ful) design**

Health, care and prosthetics: co-design methodologies in the case of autofabricantes	519
See the unseen: a co-creation design process for children with incarcerated parents	524
The power of photovoice: AI support provides voicing opportunities for children in sex education	529
Co-design for the common good: a holistic approach to workspace projects	533
Co-designing neighbourhood identities. How to share memories and experiences towards a common sense of belonging	538

**Design(ers) & learning**

Universal design for learning as an inclusive teaching methodology for an African art and culture course in Ghana	544
Material-led thinking as a practice of care: a strategy from art and design education	550
Artful care for self and others in daily design practice	555
Material metaphors: method for physicalising relations and experiences	560

**Design ethos**

A South African approach towards a caring design practice	565
Weighing the tensions of nostalgia, necessity, and care in contemplating the future of the Nigerian design-scape	570
Food as a form of care: designing social innovative processes and practices	575

Designing with posthuman kinship: from posthuman theory to human-non human collaborative design approaches	580
Beyond empathy: how curiosity leads to greater care	585

**Inclusive approaches to intangible cultural heritage**

Convention versus contemporaneity: the affordances of design-led mediation towards sustaining an ancestral cycle of linen making in Castelões, Portugal	590
Combining care for planet, people and culture towards circularity	594
Media art creation process using digitized archetype of Korean traditional dance movement	600
Envisioning design strategies for intangible cultural heritage activation	604

**Sustaining traditional crafts and techniques**

Craft for care, design for life. Heritage contemporary enhancement and communication design tools as a resource for social changes, fostering diversity and inclusion	610
Embroidered heritage: a design-led visual ethnography of traditional Palestinian motifs	615

**Adaptation of the built environment**

Design for Ukraine's heritage: engaging international students during times of war through design activism	619
The technical compatibility of vertical greening with built heritage	624
New design models for proximity retail and senior inclusion	628
Investigating spatial patterns of green infrastructure at built heritage sites in Antwerp, Belgium	632
From architecture to community: adaptive reuse as social practice	636

**Participation and role of communities**

Methodology and evaluation of digital assets reconstruction of cultural heritage with visitor participation in museum	642
Community heritage: an immersive approach to disaster resilience	646
Caring for human diversity and built heritage through design: a multiple case study enquiry	651

**Poster abstracts**

Adding value to the future through design and entrepreneurship: PLACE	657
A video game for emotion regulation of medical students	658
Video game design for ecological impacts	659
Dwell and move, change ensues	660
Transposing timelines	661
Artificial intelligence-aided type design for Chinese script	662
Design and reconstruction of the new interest youth community in china in the post-epidemic era	663
Sound E-scape: an interactive, digital application for music therapy and soundscape generation	664
Development of existing biophilic interior design definition	665

Design-driven approaches to human augmentation. An exploratory study	666	Human augmentation: the role of design in the design of on-body interfaces for cognitive-sensorial wellbeing	718
Designing with people: creating a multi-level interdisciplinary design education environment for more inclusion	667	A conception toward design narratives for innovation	721
Material connotations: meta-structure research of practice based projects with invasive species plant waste	668	Home away from home – The role of design methods in processing trauma of forced migration and loss of place	725
From collecting natural objects to presenting the future anthropocene: exhibition design for the anthropocene theme in museums	669	Decoloniality and healing: confronting inter-generational trauma/ideologies through architectural preservation and education	728
Catacombs: refuge on the border of the virtual and the real	670	The ephemerality of an organic material and its implications: a context specific study with invasive exotic species (Japanese knotweed) waste in Genk, Belgium	731
Hybrid specimens: Phygital artefacts at the intersection of analogue + digital crafts	671	Visual communication bridging intercultural barriers	734
Content management system in mapping movable objects	672	Feeling the future car: designing for driving pleasure in the era of co-driving	737
FlavourGame: interaction design in hybrid games	673	Mediterranean landscapes in emergency: nature and culture	739
Bibliometrics in circular design visual representation	674	Key Performance Indicators for measuring and evaluating users' sensory perceptions and behaviors in learning spaces in higher design education	742
Inclusivity as a hype phenomenon in advertising	675	Textile handcraft making and women creators' psychological well-being: a narrative review	746
Inclusion in recruiting	676	Cross-case analysis on the integration of extended reality (XR) with the design and planning of the built environment	750
Values, design and educational project: contemporary projections	677	Ecosystem services: an interpretive paradigm of urban and territorial heritage. Strategies, guidelines, and vision for sustainable cities	754
Project Hope : the creative revolution mural, a human singularity approach	678	Characteristic analysis of future-oriented design based on cognitive context theory	757
More-than-human ways of thinking through felting wool	679	Digital wellbeing and design	760
"Care strategies to strengthen heritage structures as a community asset during the pandemic: the case of Bahay Nakpil-Bautista"	680	Appropriation and appreciation of Austrian and Indonesian puppetry	763
A novel offloading insole system designed for healthcare	681	Reinventing the gastronomic experience: using interactive digital environments to raise awareness of food-related cultural heritage	766
Towards an embodied expression of pandemic nodes & networks in the age of social distancing	682	Developing cultural heritage sustainability from the perspective of participatory sentimental souvenir design	770
<b>Cumulus Phd network</b>	683	How does design intervention promote sustainable rural transition: an analytical framework based on the multi-level perspective model	774
Evolution of 'Mashrabiya' in the Middle East & North Africa - traditional wood carving technique revival	684	Designing future hybrid creative space using digital tools in educational institutions and organizations	777
Exploring the potential of material innovation to revitalize traditional crafts in Egypt	687		
An overview of design suggestions for contemporary theatrical VR productions	690	<b>Reviewers</b>	781
Polymath interpolation in transdisciplinary open-ended design – design for conservation	693		
Implementation of design culture as a strategic innovation through design-oriented industrial conversion and product diversification	696		
Sustainable transformation of age-friendly community centres based on transition design	700		
Parametric Joinery. Development of a system of configurable joints	704		
Designing a ward inventory for a sustainable healthcare. Framework for healthcare providers of configurations among disposable medical devices, clinical procedures, and medical equipment in the neonatology department.	707		
A safe space of creativity-designing with vulnerable female communities	711		
The direction of wayfinding. From the identification of a place to the expression of its meaning.	715		

CONNECTIVITY  
and CREATIVITY  
in times of CONFLICT

# Preface

# Connectivity and creativity in times of conflict

Kristof Vaes, Jouke Verlinden

Faculty of Design Sciences, University of Antwerp  
Mutsaardstraat 32, 2000 Antwerp, Belgium  
kristof.vaes@uantwerpen.be

## Welcome to the Cumulus Antwerp 2023 conference proceedings!

Since the beginning of our academic journey, a plaque was solemnly hanging in the teacher's lounge, proudly displaying Antwerp's affiliation with the esteemed Cumulus Association since 2011. Back then, our aspirations were limited to scholarly pursuits, with our primary focus on advancing research through design as a promising scientific avenue. How times have changed!

In the present era, we find ourselves grappling with a host of pressing issues that demand our attention. The looming climate crisis, coupled with global economic and political instability, escalating living costs, social injustices, and the prevalence of isolation, have collectively questioned the very essence and value of design and art. Our society is persistently confronted with conflicts, contradictions, and an ever-evolving perspective, shaped by the non-neutral influence of technology and organizations.

In the face of these challenges, however, we have the opportunity to nurture a more positive perspective. By recognizing the changing landscape, we can see it as an impetus for innovation and positive transformation. As designers and artists, we have the unique ability to navigate this complexity, using our creative skills to address and mitigate problems. Through broader thinking and an inclusive approach, we can redefine the role of design and art and contribute to a more resilient, harmonious, and interconnected society. The Faculty of Design Sciences of the University of Antwerp, in close collaboration with the Royal Academy of Fine Arts, hosted the Cumulus three-day conference in Antwerp from April 12-15, 2023. With a legacy of struggle, the city of Antwerp represents an economic and cultural hive of activity. The current situation, led to the definition of the overall theme of Cumulus Antwerp: **Connectivity and creativity in times of conflict**. Concepts from avant-garde to conformism fashion, product design and new media have flourished in Antwerp. In this tradition, we invited the Cumulus community, designers, artists, and educators to investigate how culture and creative industry can offer resilience, consolation, and innovation models on human scale. We believe that these proceedings will be a valuable resource for anyone interested in exploring how design and creativity can contribute to building a more sustainable, equitable, and connected world. It will act as a worthy addition to the plaque we once found.

As a community of educators, researchers, and practitioners, the Cumulus Association envisions a world where creativity and design are instrumental in shaping a sustainable future. In this context, the four conference themes of Nature positive/Design for transformation, Digital futures/Hybrid reality, Handle with care/Inclusivity, and METHOD/ART align with the association's vision, and address how design can impact and harness the power of connectivity and creativity to promote positive change. Each theme addressed how design and creative industries can offer resilience, consolation, and innovative models on a human scale, and how our research and education in design can highlight novel directions.

The **Nature Positive/Design for Transformation** track at the Cumulus Conference presented thought-provoking questions on the role of design in the face of sustainability challenges. The programme included five workshops, visual papers, and posters. Eight themes were identified to guide the paper sessions, and keynote Leen Gorissen was invited to talk about Natural Intelligence (NI) – Towards Nature Positive Design and bio-inspired innovation.

Design methodology and design education were two prominent themes. Designers explored new approaches to addressing complex challenges and embraced transdisciplinary collaboration. Design Materialisation explored the future of material selection, while Biophilic Approaches integrated living organisms into design processes. The Eco-Social Transitions theme connected systems thinking and co-creation with leadership and business. Fashion Innovations addressed sustainable design thinking, indigenous textiles and changing unsustainable lifestyles. The intersection of people-centred design and urban planning was explored in Urban Design and Citizen Inclusion, which highlighted the importance of sustainable transport and meeting residents' basic needs. The democratisation of design and the potential of digitisation were discussed in sessions on Do-it-Yourself studies and Design & Digitisation, respectively. These sessions showed the transformative power of design in creating regenerative social paradigms.

Overall, the papers emphasised the need for nature-positive choices in design and highlighted the collective responsibility of designers as agents of change. In this track, a best paper award was granted to **Erminia D'Itria** (Politecnico di Milano) for the article *"Fashion design matter: the role of design in guiding a sustainable transformation in Europe"*.

**Digital futures/Hybrid reality** explored the intersection of design and technology. This theme discussed how we can use technology to create better designs and more immersive experiences. We heard from experts in the field of virtual and augmented reality, including the keynote of Guy Van Wymeersch from Barco, who reflected on Creative leadership in innovation in a technology company and how to stay relevant in a faster-moving world. We also contrasted this with the talk of Professor Bert De Munck, who talked about the reinventions of craft: A historical view on the usefulness of craftsmanship.

Generative AI systems such as ChatGPT and Dall-E have ushered in a new era of fear and hope and redefined the role of designers. This transformation requires a critical mindset, innovative passion, and skills to turn digital capabilities into valuable tools.

The intersection of craft and digital immersive technologies explored hybrid workflows and production processes for augmented textile artefacts and fashion-tech products. Research by design publications addressed the integration of technology in music-making, enriched and accessible museums, and the role of technology in enhancing learning experiences. Design for and with extended reality explored immersive technologies, creativity, and materiality, offering new perspectives on ceramic creation and storytelling in virtual environments. Design for and with digital fabrication highlighted design methods and collaboration in additive manufacturing, looking at the impact of automation and new materials. Urban-scale digital analysed the relationship between technology and urban spaces, highlighting the need to rethink traditional urban planning and design for flexible and adaptable environments. Technology-driven design education integrated AI and virtual reality into design education, emphasising collaboration and the changing role of designers. Digital fashion examined sustainable fashion, the role of digital technology and the evolution of fashion in the metaverse, exploring innovative shopping experiences and deconstructing materiality. In this track, a best paper award was granted to **Diego Trujillo-Pisanty, Heriberto Olguín-Simon, Nicolás Spitalier-Tron, Paola Ferrari-Garcia, Jordi Fragozo-Terreros, Alejandro Lobo-Barrera, Ximena Peña-Rios, Patricio Pous-Piereson, Fabiola Toledo-Galindo, Julio Torres-Cazares** and **Roberto Cabezas-Hernandez** (CENTRO, Mexico City, Mexico) for the article *"Metaphysical instruments: prototypes for hybrid and live music-making"*.

**Handle with Care/Inclusivity** is a track linking Inclusive Design, Design for Health and Well-being and Cultural Heritage. The conference was kicked off with the keynote of Dirk Geldof, who positioned Antwerp as a superdiverse majority-minority city and expressed the importance of diverse-sensitive design. Scientific contributions addressed challenges related to care in design and care for cultural heritage, merging insights from different fields. 'Care in design' focused on bi- or omnidirectional interactions with attention to reciprocity between humans, non-humans, and technology. Design for/as communication explored the reciprocal connection between design and communication, using digital tools and design toolkits for sensitive issues. Design for Diverse Users examined the importance of gender and

specific groups, aiming at more inclusive design processes and outcomes. The Care (full) spaces section analysed the role of the built environment from urban, architectural, and interior design perspectives. Co-creating care (full) designs involves involving end users, empowering unheard groups, and promoting (self-) acceptance. The section on 'Caring for heritage and conservation' took an integrated approach and explored how heritage can guide transformation and adaptation to global challenges. Inclusive Approaches to Intangible Cultural Heritage proposed design strategies to activate heritage and promote diversity and inclusion. Sustaining Traditional Crafts and Techniques focused on preserving cultural heritage objects and techniques. The Adaptation of the Built Environment component explored climate change and adaptive reuse. The Participation and Role of Communities section analysed digital solutions, participation in times of war and the role of communities in disasters. These sections provided insights and strategies to transform heritage in response to current and future global challenges. In this track, a best paper award was granted to **Silje Alberthe Kamille Friis & Annegrete Mølhave** (Royal Danish Academy, Denmark) for the article *"Artful care for self and others in daily design practice"*.

**METHOD/ART** explored the role of methodology in artistic practice and research, addressing how artists can use their unique perspectives to create innovative and impactful work. During crises, art processes emerge to address critical conditions, from the collapse of local social systems to global ecological catastrophes. Overcoming old conventions and the illusion of control is essential in times of conflict and requires new capacities for artistic engagement and co-action. Art (and design) has the capacity to absorb and reflect our value systems, making them powerful agents of transformation. We took the opportunity to congratulate the Royal Academy of Fine Arts Antwerp on their 360-year existence, and for their invaluable contribution to the creative landscape of the city.

Over the past days we have been fortunate to experience a truly enriching event, re-connecting and forging new ties with participants from all over the world. After a long period of absence due to the pandemic, the opportunity to network face-to-face during this conference has proved hugely rewarding. The physical networking opportunities provided by the conference will undoubtedly foster new collaborations and connections. We hope that the ideas presented at the conference will continue to inspire, influence, and spark discussions and collaborations in the design community for years to come. Moreover, we hope that the ripple effect of this conference extends far beyond the immediate participants. As attendees return to their respective communities, armed with newfound inspiration and fresh perspectives, they themselves will become catalysts for change and progress. The insights gained and connections forged here will inevitably spread and spark discussions, collaborations and synergies that will enrich the design landscape on a global scale.

Warmest regards from the Cumulus Antwerp team, we look forward to continuing our creative journey together.

## Acknowledgments

We would like to extend our heartfelt thanks to the Cumulus board and Association, our partners Antwerp Powered by Creatives, Visit Flanders, and Antwerp Convention Bureau, for their support in making this conference a success. We also

express our gratitude to all contributors and presenters for their inspiring contribution and their connecting and creative mindset. Finally, we would like to express our gratitude to all our colleagues, volunteers and everyone who made Cumulus Antwerp 2023 a success.

---

# President's message - Design for Adaptation in Times of Complexity

**Lorenzo Imbesi**

Full Professor, Sapienza University of Rome  
President, Cumulus Association

The 2023 Cumulus conference in Antwerp at the Faculty of Design Sciences of the University of Antwerp, in close collaboration with the Royal Academy of Fine Arts, is the second conference in Belgium in the history of Cumulus and it is taking back our large community in presence in Europe after the global pandemic. The very large attendance from all over the world during the four days of the conference is well speaking about the strong need to get back to share design projects, research, and educational experiences in person. The city of Antwerp was a perfect place to host the large global community of Cumulus, while standing as an economic and cultural center, where have been flourishing creativity and design for the development of the sectors of fashion, product design, and new media.

The topic selected by the co-Chairs Inge Bertels, Kristof Vaes, and Jouke Verlinden is revolving around the concept of connectivity and creativity in times of conflict, which is a very current topic challenging designers, artists, educators to discuss and explore on how culture and creative industry are offering clear solutions for resilience and innovation models on human scale, crossing the three sub-topics of sustainability, digital futures, and inclusivity.

While producing large number of paper presentations, panels, keynotes, PhD networking and working groups, the conference was developed around four track topics, raising four dichotomies: Nature positive/Design for transformation, Digital futures/Hybrid reality, Handle with care/Inclusivity, and Method/Art.

As a final result, the volume of the conference proceedings is sending a clear message to the large global design community to work and give a positive answer to the challenges of our present and future society. The design action is always impacting the society and the environment with creative solutions, since it deals with local and global emergencies. Aspects such as complexity and plurality, uncertainty and nonlinearity, or reciprocity, force every designer to a new responsibility to the "other", be it a person, an animal, vegetable, or artifact. Consequently, the design action is always a problematic and multidimensional action, that is answering to new questions in creative ways, often related to the technological acceleration and the social development: the environment and the ecology, justice and social equity, globalization and local cultures, new technologies and scientific research,

new forms of biological and artificial life and the responsibility towards future generations.

While exploring new approaches and addressing complex challenges through transdisciplinary collaboration, the conference addressed the notion of network, which is including openness, inclusivity, intelligence, evolution, innovation, sociability, creativity, development, so highlighting how it is important for the designers to adopt collaborative approaches to design.

Additionally, the notion of network is encompassing the mission of Cumulus Association to provide a global platform to encounter worldwide and to share knowledge: spanning all five continents and bringing together more than 350 members across different art, design and media educational institutions, Cumulus is a diverse global family, bound together by a multiplicity of experiences and perspectives, while fostering collaboration for creative solutions towards sustainability, equity and innovation. Since design is growing globally and becoming a large complex eco-system, it is essential for designers and educators to understand, and at the same time, to be connected to the proliferating global networks, so that they can develop new forms collaboration, and reach all those places in the world where research and innovation are moving in the direction of new scenarios for design.

While responding to the current and future challenges for design, the 2023 Cumulus conference at the University of Antwerp was reflecting and giving voice to such diverse and plural environment, so respecting the emerging differences and nurturing the values of plurality, global engagement, and open dialogue, at the same time generating a welcoming and friendly environment for innovation and a joyful experience for our members.

In the following pages of this volume, you will find part of the memories of such rich experience. The rest is staying in the mind, the soul and the actions of the people attending in Antwerp from all over the world, who will keep networking and collaborating after they are back, so extending the outcomes to the rest of our community even after the conference.

CONNECTIVITY  
and CREATIVITY  
in times of CONFLICT

## Introduction

'The danger isn't that AI destroys us.  
It's that it drives us insane'

— Jaron Lanier (Hattenstone, 2023)

While our preparations were running, generative AI systems such as ChatGPT and Dall-E suddenly headlined and underlined a new era of fear and hope. As the quote above of a prevalent virtual reality pioneer underlines, this requires a critical mindset with a passion for innovation. The Metaverse, 3D printing, artificial intelligence, and similar phenomena are re-shaping the role of the designer: a novel skillset and attitude is required to convert these digital capabilities into valuable tools and methods as once eluded by Engelbart (1962) and Reikimoto (2014). This incorporates defining types of cyber-physical or augmented craftsmanship, not forgetting about sustainability, social inclusion, and aesthetics. Furthermore, how can we ensure that the human (both collective and individual) stays in the driver seat, while political and economic agendas complicate a true human-centered design in times of industry 4.0, algorithms, distributed data, fuzzy intellectual property, and so forth.

For this track we received over 167 proposals that, after a double-blind review, resulted in 37 high-quality papers and 11 posters. These contributions go beyond the technical, to envision the capabilities of software/hardware as a meta-medium, with specific applications for the creative industry, and to frame the educational/ethical challenges in case studies and reflections.

The section **new crafts and craftspeople**, revolves around the intersection of craft and digital immersive technologies, exploring hybrid workflows and production processes for creating augmented textile artefacts and fashion-tech products. The papers discuss learning experiences and experiments in digital fabrication, as well as the design of hybrid workflows and business models to engage with Industry 4.0 technologies in craft production.

**Research through design in the cyber-physical era** deals addresses the integration of technology with music-making and human-computer interaction in designerly ways, exploring physical interactions and sensory experiences in the design of

digital products, and rethinking traditional paradigms of disability and the body in relation to technology.

The section entitled **redefining the role of designers**, explores the intersection of computational thinking, design, and fabrication in creating augmented and accessible museums. The papers cover a range of topics such as co-creating 3D materials with synesthetic AI, speculating futures in an age of nostalgia, and the use of cabinets of curiosities to explore collections and tokens in the postcolonial context. The papers highlight the potential for technology to enhance the museum experience and promote inclusivity, while also addressing the challenges and complexities of curating collections and representing diverse histories.

The section **usability and performance of innovations** addresses the importance of evaluating and assessing new designs, with an increasing role of technology in enhancing learning, work, and shopping experiences.

**Design for and with extended reality** focuses on the intersection of immersive technologies, creativity, and materiality. This includes applications such as virtual reality and the metaverse, for creative expression and communication. The papers explore how these technologies can be used to assist in ceramic creation, stimulate storytelling and communication competencies, and introduce the concept of material experience in virtual environments. Additionally, the theme also touches upon the purpose of furniture in the metaverse.

The section **design for and with digital fabrication** provides new insights towards design methods and techniques in the field of additive manufacturing (AM). The papers also highlight the importance of knowledge transfer and collaboration in advancing the commercialisation of AM. Additionally, there is a focus on the use of new materials and technologies in the design process, such as electronic textiles and circular design materials. Finally, the papers address the impact of automation and technology on traditional craft practices.

The **digital on an urban scale** covers exploration and design of urban spaces in the context of technological advancements, particularly in the realm of smart cities and extended reality. They examine the relationship between technology and urban environments, exploring concepts such as data activation, engagement, and the use of 5G technology to create smart product-service systems. The papers also address the

need to rethink traditional notions of urban planning and design, to create more flexible and adaptable urban spaces that can respond to the changing needs of communities.

The section **technology-driven design education** covers new insights in the integration of technology into design education, specifically AI and virtual reality, as well as the need for collaboration and interaction in the design process. The papers also touch on the evolving role of designers in a technology-driven world.

Finally, the common themes of the section **digital fashion** are sustainable fashion, the use of digital technology in fashion, and the evolution of fashion into the virtual space of the metaverse. The papers explore the potential of digital twins,

media technologies, NFTs, and direct-to-avatar retail experiences to improve sustainability, design knowledge, and customer engagement in fashion. They also discuss the challenges and opportunities of deconstructing materiality in fashion and creating new forms of value and expression in the metaverse.

Apart from these academic papers, we hosted workshops, posters, and this time also a curated collection of lecture/performances featuring cyber-physical artworks. We Thank the authors and reviewers for their hard work and hope that this set offers a new chapter to Cumulus, to provide a guide to move from traditional design and heritage to critical integration and convergence.

---

## Abstract

The European fashion craftsmanship sector is renowned worldwide for its excellence and competitive value in producing tangible and intangible cultural heritage (ICH) in creative practices and material artifacts. However, the competition of mass production at lower costs and the increasing jobs digitalization threatens the survival of fashion craftsmanship knowledge. In this context, Industry 4.0 (I4.0) technologies could become a trigger to transform fashion craftsmanship by hybridizing workflows via new tools, gestures, and creative acts. Due to a technological and socio-cultural divide between the old and future generations of fashion craftspeople, new educational models are necessary to update the skills and imagination of future fashion professionals towards the revival of crafts ICH while accounting for holistic multidimensional sustainability. Therefore, the paper presents an interdisciplinary challenge-based learning experience conducted at Politecnico di Milano and University of Borås, combining a design and business management methodological approach to deliver Fashion-Tech proofs of concepts (covering product, service, process, and business model innovations). Delivered proofs of concepts demonstrate the potential of I4.0 technologies to preserve cultural diversity and local heritage, improve multiple dimensions of sustainability, and empower creativity and connectivity between different stakeholders. New products, services, processes, and business ecosystems of hybrid fashion craftsmanship can contribute to interdisciplinary learning spaces where different users/stakeholders connect and engage in co-creation and co-learning activities. Besides, the developed educational model can be applied to training fashion craftspeople 4.0.

## Author keywords

digital design; digital fabrication; fashion craftsmanship 4.0; education for Fashion-Tech; sustainability.

## Introduction

The technological and socio-cultural divide between old and future fashion craftspeople is nowadays impacting the lack of generational turnover and the preservation of intangi-

ble cultural heritage (ICH) in the Italian and European fashion craft sectors. The meaningful application of Industry 4.0 (I4.0) technologies via new educational models could bridge this gap by enabling digital literacy, the connection of stakeholders, and the pursuit of environmental, political, cultural, and socio-economic sustainability. The paper presents the results of an interdisciplinary learning experience and discusses the implications of training future professionals in the hybrid (i.e., analogue/digital) fashion craftsmanship sector, focusing on creativity and collaboration.

## Literature review

### Traditional and future fashion craftsmanship at risk of extinction

The European fashion craftsmanship sector is recognized for its quality, creativity, and competitive economic value in producing cultural content embedded into creative practices and material products. European (e.g., Italy, France, Germany, Spain, Portugal) fashion micro-enterprises of craft-based high-end personal goods (e.g., textile and clothing, jewellery, eyewear, and leather goods accessories) represent 74% of the global value of these products (EC, 2023a). In particular, the EU textile and clothing craft sector employs 1.5 million people and produces a turnover of €147 billion (Euratex, 2022); meanwhile, about 36K enterprises generating a turnover of €48 billion and employing around 435K people produce leather crafts (EC, 2023c). Fashion craftspeople inherit and preserve the knowledge, expertise, and skills of crafting unique and excellent artefacts as Intangible Cultural Heritage (ICH), being custodians of traditional expertise situated in specific territories and communities (UNESCO, 2003). However, the competition of global mass production at lower costs, the delocalization of manufacturing to places with cheaper hand labour, and the spreading digitalization are forecasted to cause a shortage of traditional fashion and textile artisanal experts across the operational, technical, managerial, creative and scientific sectors (ETP, 2016). Passing the tacit artisanal knowledge through the familiar entourage and on-the-job learning practices inside workshops further

reduces the number of available expert craftspeople in the fashion sector. For example, in 2013, Confartigianato Imprese predicted an unexpected death of Italian craft entrepreneurs, specifically in the sector of design, fashion, and personal luxury items (e.g., leather, footwear, clothing, and jewellery), thus impacting the decrease of 'Made in Italy' economy by 9.1% (Bonfanti et al., 2015). Since the fashion craftsmanship sector is a significant asset for economic, cultural, social, and environmental sustainability, the European Commission primarily focuses on revitalizing European urban and rural areas by nearshoring the craftsmanship processes toward a feasible and resilient governance of a post-emergency society (EC, 2023b).

### Exploiting digital technologies toward fashion craftsmanship 4.0

To stay competitive against mass globalization and production, small and local artisanal enterprises could exploit I4.0 technologies to develop highly customized products through on-demand production at fair and competitive prices on the market, while increasing product uniqueness and quality. In addition, they can become a trigger for encouraging new generations of artisans' to produce new crafts through new workflows aided by I4.0 technologies, thus hybridizing traditional practices towards a systemic paradigm change in the fashion ecosystem (McCullough, 2015; Bertola and Teunisen, 2018). I4.0 technologies could also help digitize traditional fashion crafts gestures and processes, translating the intangible fashion knowledge into teaching materials to incentivize mutual learning between humans and technologies, thus nurturing the future generation of fashion professionals in old craft sectors (Casciani and Vandi, 2022). Besides, studies demonstrate that I4.0 technologies define new relationships between artisans and technologies, particularly in assisting or augmenting daily manufacturing tasks toward operators' health, well-being, and safety (Burden, Donovan, Caldwell, Teixeira, 2022). However, the digital transformation in Italian fashion crafts enterprises is still far from a mature reach, with 9.5% in the eyewear sector, 5.8% in jewellery, 14.2% in the clothing and apparel sector, 8.4% in textile, 1.6% in footwear (Digital Manufacturing Lab, 2018). The main constraints for this limited adoption from Italian and European fashion crafts enterprises are the inadequate knowledge about I4.0 technologies' opportunities which is related to a different business strategy and culture of the enterprise, the lack of internal/external competences, constrained financial resources, and the difficulty in identifying the right partner to drive the digital transition (Digital Manufacturing Lab, 2018; Kusters et al., 2017). Adopting I4.0 technologies represents a complex challenge for the present craftspeople with limited digital skills across engineering, design, and business management domains (Jimeno-Morenilla et al., 2021). The advantages of embracing digital technologies in fashion craft-based workflows rely on boosting products' quality and exclusivity, improving working conditions, increasing productivity and efficiency, and reaching sustainability. From a cultural perspective, digital technologies could help revive the crafts communities and maintain cultural diversity and local identity (Brown and Vacca, 2022). Despite this, craftspeople face sociocultural barriers toward I4.0 technologies in terms of expectations, reluctance to use, perceived lower quality of implemented crafting processes, and fear of the complete

automation of work towards the disappearance of artisanal practices and job loss (Mosca and La Rosa, 2019).

### Training future fashion hybrid craftspeople

The shortage of craftspeople and associated skills and knowledge in the fashion sector is expected by 2030 (ETP 2022) due to a huge turnover of employees after the retirement of highly specialized artisans. Besides, fashion craftspeople face the challenge of adapting their workflows to respond to the green and digital economy transition, with the conflicting demand of focusing on retaining existing competencies, and attracting new talents (ETP, 2022). Hand-based craftsmanship has lost its attractiveness and safety with a consequent decrease in interest by a younger generation of professionals. However, research has forecasted a future scenario of fashion industries in 2030 focused on the Renaissance of the Crafts regarding production, employment, required skills, and competences (Skills 4 Smart TCLF Industries 2030, 2022).

The intergenerational technological and socio-cultural gap between old and new fashion craftspeople should be mitigated to preserve and transmit the fashion craftsmanship ICH through digital literacy provision to the older generation of artisans, meanwhile incentivizing the interest of the younger generation to hand-based craftsmanship hybridized with the use of I4.0 technologies. New educational models aim to achieve the aforementioned objective and to drive the digital transformation and sustainability of the European fashion eco-system, preserving both specialised traditional skills while advancing the new ones relevant to the digital evolution of the sector (Bertola and Vandi, 2021; Digital Education Action Plan (2021-2027), 2021; Unesco, 2017). Besides, new educational models should also foster the encounter of traditional and future craftspeople, supporting collaboration and peer-to-peer learning and education. In this direction, a series of piloted learning experiences (LE) have already suggested that innovative proof of concepts of sustainable Fashion-Tech solutions could be enhanced by the use of a challenge-based learning (CBL) approach, by combining design and business model perspectives (Casciani et al., 2020; Casciani and Colombi, 2022; Ma, 2022;). In the CBL approach, students face real-life and multidimensional problems involving social, cultural, economic, technological, and environmental dimensions and are encouraged to formulate their solution by collaborating with different stakeholders involved/affected by the process or solution, thus allowing the connection between students, teaching staff, professionals, technologists, researchers, and artisans (Nichols and Cator, 2009; Nichols et al. 2016). Due to the complexity of the real-world challenges, the CBL approach supports the connection of knowledge among different disciplines, resulting in sharing common glossaries, and perspectives toward the synergistic integration and modification of disciplinary contributions. Hence, education is crucial to maintain, and valorise fashion craftsmanship ICH by cultivating and nurturing future fashion professionals that combine digital skills while preserving the traditional material and manufacturing competences.

### Methodology

The paper presents an international and interdisciplinary LE conducted by Politecnico di Milano and University of Borås collaborating to train the hybrid fashion professionals of the future with soft skills, technical/digital, and subject-specific skills while boosting integration between the human, so-

cio-cultural, and economic perspectives. The LE focused on the implementation of the more operative I4.0 technologies such as 3D printing (3DP), 3D scanning (3DS), laser cutting (LC), collaborative robotics (CR), virtual and augmented reality (VR/AR) in the design of new craft products/systems of products, new hybrid digital crafting processes, and new business models that also account for a multidimensional perspective of sustainability. By coupling design-driven and business management innovation perspectives inside an interdisciplinary action-oriented pedagogical approach, we aimed to encourage a positive and culturally meaningful paradigmatic shift, bringing students closer to crafts and craftspeople and preserving and enhancing traditional practices through digital transformation. The combination of design and business model innovation education is crucial to support the possibility of achieving a real and fruitful digital transition in the fashion craftsmanship sector (Jin & Shin, 2021). Focusing on the comparison between pre- and post-course skills self-assessments, derived from the answers from the questionnaire and by the analysis of the LE results such as proof of concepts and group project reports, the paper aims to discuss the impact of the piloted educational models for the fashion crafts' digital transformation towards sustainability. In particular, this study intends sustainability as a holistic multidimensional concept entailing environmental, economic, social, and cultural dimensions (Fletcher, 2014; UCLG, 2010; British Council, 2020).

### **LE design: developing collaboration, toolkit, and educational methodology**

#### **Growing interdisciplinary Fashion-Tech partnerships**

The LE has been offered to 21 international and interdisciplinary students (76% female, 19% male, 5% non-binary gender) from graphic design (5%), product design (21%), fashion design (52%), architecture and landscape (10.5%), and business management (10.5%). They worked in 5 interdisciplinary groups mentored by 2 academic researchers/teaching staff from the involved Universities and 2 professional tutors from a Fashion-Tech start-up focusing on digital transformation, and non-standard fabrication technologies (Materea). The company participated actively in the LE design, delivered technology-focused lectures as expert trainers, and mentored students during the CBL phase. Students were asked to select one between five different applications of the fashion craftsmanship sectors (jewellery, textile and clothing, small and medium accessories in leather, footwear, and eyewear) since these sectors are at the forefront of Italian fashion craftsmanship (Bonfanti et al. 2015). Students were expected to focus on specific historical craftsmanship expertise and techniques with no geographical boundaries. However, being asked to include the craftspeople of the selected applications in the research and design processes, many focused on the Italian geographical context because most students were based in Italy. However, the LE allowed for a broader geographical scope/context to account for international students' interests and competences. In particular, some students focused on fashion craftsmanship in the Far East and Asia. Students have developed solutions such as low-fidelity prototypes, visualizations of workflows, and mock-ups of designed solutions, tools, and software. These outputs were

shown to the stakeholders to test and provide a reality-check of the proposed proofs of concepts (PoC). Craftspeople were surveyed (7) and interviewed/observed (11) during their activities and were confronted with the hybridized crafted processes. Targeted final consumers were interviewed (12) and surveyed (78) to define needs and feedback in relation to the proposed hybridized crafted solutions.

#### **Setting connected learning workspaces**

The LE was delivered through 13 digital lectures divided into an initial theoretical part (DISCOVER), providing basic knowledge on design, methodology, engineering, and business management topics, and followed by a CBL part (DESIGN). It was aided by a system of educational tools providing an individual personalised learning path, such as Fashion-Tech Open Educational Resources (OER, 2022), and digital collaborative visual boards structured on MIRO to aid the communication, interdisciplinary exchange, collaboration on design activities and project management, toward a sharing of disciplinary glossary and methodologies, and asynchronous and synchronous interactions. OERs were focused on levelling the knowledge for students of different backgrounds to easily drive the CBL. Collaborative visual spaces were useful to both set up the activities, control the progress through the course timeline, and set a fruitful partnership between the instructors and learners as co-researchers/designers of the solutions during mentoring activities.

#### **Joining design and business-driven innovation methods toward sustainability**

To conduct a digital LE, a user-centred design approach combined with principles of design for sustainability/circularity and sustainable/circular business model (BM) innovation perspective was decided (Fig.1). User research aimed to understand craftspeople workflow, activities, tools, materials, needs, and challenges in integrating I4.0 technologies. This was complemented with final customer research to delimit main market segments for hybrid fashion craft. In addition, students focused on sustainability strategy, starting from the project groups' vision, mission, and core sustainability values formulation and then connecting it to specific Sustainable Development Goals (SDGs). Subsequently, the hybrid systems of product, process, and business model concept ideas were conceived, integrating research of available digital technologies adaptable in the fashion craft sector. Simultaneously running the product, process, and business model conceptualization stages aimed to facilitate the systemic interdisciplinary approach toward sustainability within the project teams. According to students' reports and evaluations, this allowed for a number of iterations and simultaneous adjustments of ideas that were detailed and visualized with low-fidelity mock-ups to be tested and validated with users (artisans + customers), thus providing a further design iteration (Fig.1).

### **LE results: hybridizing fashion craftsmanship practice through education**

#### **Hybridizing crafts system of products, processes, services, and business models**

Implementing I4.0 technologies in students' solutions of hybrid systems of products, services, processes, and business models influenced the redefinition of fashion design, production,

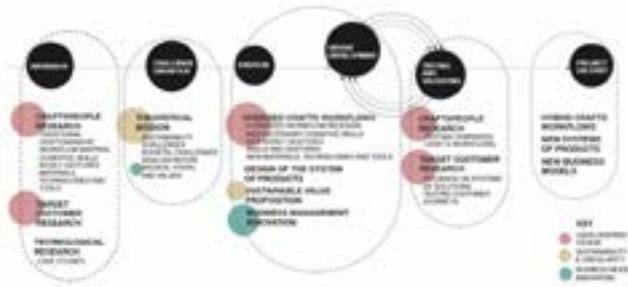

Figure 1. LE workflow from research to project delivery, blending design, and BM education

and consumption logic by challenging existing unsustainable models while attempting to preserve fashion craft ICH (Fig.2).

Students have developed 5 proof of concepts (PoCs) focusing on purely hand-based craft sectors (e.g., jacquard crocheting, stringing beads, hat weaving) and hybrid sectors already using technologies in some parts of the manufacturing processes (e.g., eyeglasses and dress shoemaking). In the latter, they focused on niche artisanal products, still very traditional and based on manual workflows.

PoC1 aims to preserve the jacquard crochet legacy by customizing the design of bags and small accessories, empowering international artisans with digital technologies to parametrize the design phases and augmented tools with sensors that amplify and extend their gestures. An online configurator allows product customization, and direct connection between artisans and customers, aiming to promote awareness of the crafts' tradition amongst the general public. PoC2 develops personalized advanced modular and long-lasting Italian dress shoes, augmenting traditional workflows of perfect fit and personalization with 3D scanning and Virtual Reality (VR) try-on technologies on a digital online configurator. The repetitive and cyclical activities of material cutting are aided through 3D printing and laser cutting, while the assembly is through collaborative robots. PoC3 develops 3D-printed interlocking beads made from recycled filaments, improving the efficien-

cy and operability of international craftspeople during the beads stringing process, while allowing beads customization via simplified parametric digital configurator and VR try-on. PoC4 focuses on customized headwear weaving, combining the precision and speed of laser cutting with the uniqueness of traditional Vietnamese crafts techniques, thus promoting local economic development and customer personalization via head scanning and an online configurator. PoC5 creates a digital platform to connect a network of artisans able to offer sustainable and fully traceable glasses made of recyclable materials, thus offering a service of disassembly, repair and renovation throughout Italy, to extend the life cycle of glasses while allowing a customized artisanal work through face scanning, digital design, and fabrication.

Similar solutions are already present in the activities of researchers and design practitioners working on creative experimentation and co-creative practices, investigating the interaction between humans and robots (Ugur, 2020; Performative robotic micro-factories, 2021), humans and digital fabrication (Pistofidou & Olmos, 2019; Morpurgo, 2017) to design hybrid crafts workflows and new solutions. Several examples exist in using online configurators for on-demand design and purchase of fashion products (Nervous Systems, 2023; Nike by you, 2023) and craftspeople networking platforms (Italian Artisan, 2023) strengthening alliances to better reach the market. Interesting processes and solutions for highly manual-based craft sectors such as knitting (Rosner & Ryokai, 2010), crocheting (Smith et al. 2015), embroidering (Flanagan & Fraietta, 2019), and beading (Nicholas et al. 2022) have already explored the possibilities of using I4.0 technologies for detecting, archiving, and teaching traditional crafts expertise, meanwhile creating more accessible data to be passed to future professionals.

### Embedding multidimensional values of BM innovation and sustainability

Interweaving traditional artisanal processes with technologies toward multidimensional sustainability dimensions, the

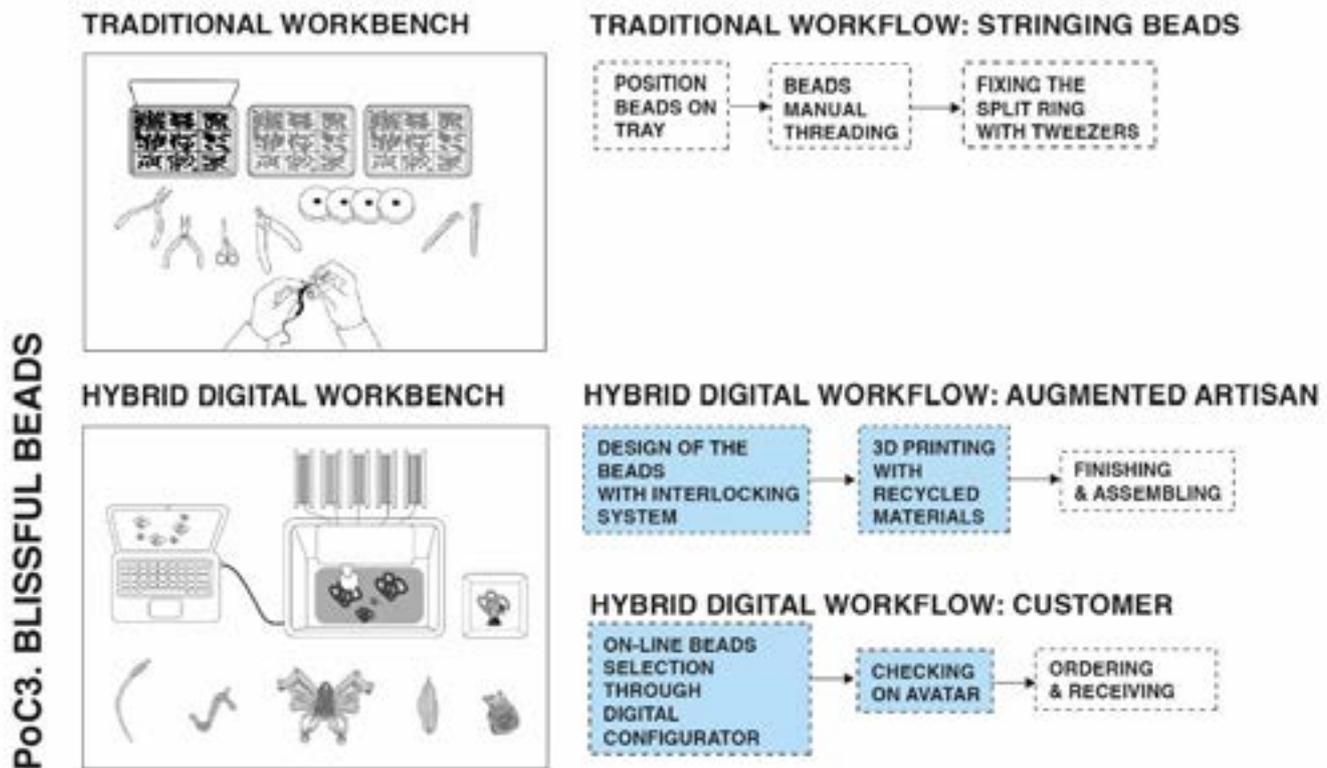

Figure 3. Business models typology of PoCs

solutions encompass different types of value creation: (i) emotional values via increased transparency and storytelling about craft processes, products, and artisans themselves; (ii) cultural value of preserving and spreading the craft ICH; (iii) sustainability/circularity improvements extending product use, and offering repair and recycling services; (iv) increased efficiency, visibility and thus competitiveness of small artisans and their products/services in the mainstream fashion market; (v) customization/self-expression opportunities for to final customers' engaged in co-creation with artisans/designers; (vi) connectivity enabled by technological tools. To monetize the developed hybrid craft solutions, the suggested business models focus on combining products and market portfolio models (e.g., different customized product offerings target different market segments) while aiming to slow resource use and close material loops. These models are acknowledged as part of the digital transformation of creative industries (Feng 2020). Traditional revenue streams based on product sales are complemented by customization, repair, and after-sales support services, whereas one of the sug-

gested business models is subscription-based. More details on the BM typology of PoCs are presented in Figure 3.

### Encoding hybrid crafts workflows in new workshops through augmented tools

All projects configured new sustainable and hybrid manufacturing workflows reflected in the design of customised digital software, augmented tools and hardware, workbenches, and spaces to conduct and streamline hybrid crafts activities, representing the affinity between craftspeople and their work environment/material organisation (Oxman, 2007). They supported the design, manufacturing, selling, and repairing phases, establishing a good encounter and negotiation between hand and digital dematerialized activities. The proposed tangible tools augmented with technologies were designed to offer the artisans functional performances, strengthening manufacturing activities in terms of dexterity, process simplification, and gestural digitalization to record crafts activities and encode them to assist craft planning and training. Tools ranged from the

**Figure 4.** Example of comparison of traditional / hybrid digital workflows and workbench / tools.  
PoC3 Blissful beads courtesy of Bachmann B., Xuan G., Lombardi B., Melodia E., Wang B.

smallest integration of sensors and actuators in augmented hooks for enhanced jacquard crocheting (PoC1) to the customization of CR hand-effectors for aiding cyclic assembly and cleaning stages (PoC2). Almost all PoCs equipped the artisans with customised digital parametric software with more intuitive interfaces to simplify artisan-computer interactions. The software is aimed to streamline digital 3D modelling toward digital fabrication (PoC3), develop and engineer made-to-measure craft productions, create networking platforms among artisans in the same sector (PoC4), and aid the configuration of customised craft artefacts by the final consumer. An example of traditional and hybrid workflows, workbenches, and designed solutions is reported in Figure 4. Both digital tools and software were designed to be connected in real-time, aiding both hybrid craft practices and on-demand retail channels, allowing streamlined automation from the design to the crafting of products, thus contributing to the empowerment of craftspeople overproduction.

### Connecting stakeholders in the hybrid fashion crafts

Almost all the developed PoC aimed to shorten the distance between stakeholders. Thanks to co-design practices allowed by digital configurators, final customers can access fashion ICH, by watching the workflow progresses of hybrid crafting of their customised products, thus unveiling the complexity, meaning, uniqueness, and beauty of fashion crafts. Therefore, digital technologies enhance the emotional values of craft products, promoting long-lasting connections between users and products, thus contributing to more responsible consumption practices, including extended product use, repair, and recycling. From the artisans' perspective, all PoCs aim to link them with the global fashion markets by preserving their local communities and ICH.

### Evolving from multidisciplinary to interdisciplinary skillsets

Students ranked soft skills acquired during the course as 3.75 (based on the Likert scale of 1-5) with particular appreciation of creativity and innovation, collaboration/teamwork, problem-solving, and critical thinking based on sustainability and interdisciplinarity considerations. They rated 4 and above subject-specific skills: fashion-tech design process and methodology, user-centred research, craftsmanship digitalization, and sustainability-oriented business model development. According to students' evaluation, mentoring activities provided: directive guidelines on how to improve the solutions (75%), inspiration and motivation to identify creative solutions (16.7%), contribution to joint co-production of knowledge/ideas in the group projects (33.3%), space for critically and independently reflecting on what improvements are needed (41.6%). Based on students' reflections in group reports, the focus on the design-driven approach complemented by business model thinking toward hybrid crafts innovation was perceived as challenging but beneficial. The business model innovation approach allowed the development of a critical stance on the economic viability of hybrid design of fashion crafts, enabling students reflection on how to attractively frame the value proposition, develop possible revenue streams and consider important partners/collaborations for intended value creation.

### Conclusions

By demonstrating new educational models based on interdisciplinary, CBL, and systemic approaches (Bertola and Tenissen, 2018; Pal, 2017), this paper argues that education is a crucial lever to help fashion craftsmanship to stay competitive on the market and preserve its tangible and intangible cultural heritage while promoting sustainability and circularity. Higher education Institutions (HEIs) can drive new learn-

ing experiences based on complementary employment of design, and BM approaches, facilitating industry/multi-stakeholder collaboration and educating future fashion professionals to drive the digital transition towards sustainable hybrid fashion craft solutions.

CBL approach empowers the creation of networks of stakeholders involved/affected by the designed solutions, bridging and bonding the actual craftspeople with the new generation of hybrid fashion professionals across design, technology, and business domains. However, it is crucial to enable stakeholders' involvement at the early stage of research and design for early validations and iterations. According to recent literature, students should develop communication and negotiation skills through visualisations and low-fidelity prototypes to enhance the engagement of the involved stakeholders and craftspeople throughout the process (Mayer et al., 2022).

As demonstrated by delivered PoCs, I4.0 technologies integration in craft workflows offers opportunities for co-designing, co-crafting, and co-learning activities between artisans-students, artisan-technologies, and artisans-customers. If I4.0 technologies were used to make the craft knowledge transfer more engaging, traditional craftspeople still retain fear and doubts about the security of collected gestural data meanwhile crafting (Muller, 2019). Additional reflections on the role of artisans, designers, and computers/machines/robots gaining agency in crafting products are thus necessary to understand the evolution of creative leadership (Stevens, 2020).

The possibilities of exploring interwoven human-machine systems offered by the presented LE have nurtured students' inspirations and skills to design craft artefacts with more complex geometries and augmented precision, while improving its uniqueness through the design of pre-determined configurable parameters, thus impacting aesthetic languages and the hyper-customization of the output (Fig. 4). Provided with design and business joint training, students have gathered an understanding of traditional craft workflows, skills, and ICH, and proposed purposeful integration of technologies to increase the entanglement of traditional and digital crafts processes towards the future competitive and sustainable hybrid fashion craftsmanship sector.

However, the limitations of this kind of LE are related to the limited time to improve and develop high-fidelity prototypes to be tested iteratively with both fashion-tech professionals and traditional craftspeople inside their workshops. Therefore, a follow-up of this LE could be developing a residency model where students could develop functional prototypes and test them directly through on-field study research, and learning-by-doing activities. This Residency approach could amplify, extend and strengthen the implications of digital technologies in transforming fashion craft professional skills while retaining ICH, and in the change of creative processes, workflows, and tools toward more sustainable and meaningful fashion solutions.

This book contains academic papers and posters of the Cumulus Antwerp conference, held in Antwerp on 12-15 April 2023. The Cumulus community, designers, artists, and educators were invited to submit contributions on how culture and creative industry can offer resilience, consolation, and innovation models on human scale, in line with the conference theme 'Connectivity and Creativity in times of Conflict'.

The contributions were double blind reviewed in the tracks

- 1) Nature positive/Design for transformation,
- 2) Digital futures/Hybrid reality,
- 3) Handle with care/Inclusivity, and
- 4) PhD network.

Editors: Kristof Vaes & Jouke Verlinden
