RAW

by **DensityDesign Research Lab, Politecnico di Milano**

RAW is an open web tool developed at the DensityDesign Research Lab (Politecnico di Milano) to create custom vector-based visualizations on top of the amazing d3.js library. Primarily conceived as a tool for designers and vis geeks, RAW aims at providing a missing link between spreadsheet applications (e.g. Microsoft Excel, Apple Numbers, Google Docs, OpenRefine, ...) and vector graphics editors (e.g. Adobe Illustrator, Inkscape, ...)
