DRS 2016 Programme Committee

Conference Chair
Peter Lloyd, University of Brighton, UK

Conference Co-Chairs
Tracy Bhamra, Loughborough University, United Kingdom
Stephen Boyd-Davis, Royal College of Art, United Kingdom
Jonathan Chapman, University of Brighton, United Kingdom
Peter Childs, Imperial College, United Kingdom

International Scientific Review Committee
Tracy Bhamra, Loughborough University, United Kingdom
Erik Bohemia, Loughborough University, United Kingdom
Lin Lin Chen, National Taiwan University of Science and Technology, Taiwan
Nathan Crilly, University of Cambridge, United Kingdom
Paul Hekkert, TU Delft, The Netherlands
Peter Lloyd, University of Brighton, UK

Debates, Conversations and Workshops Chairs
Stella Boess, TU Delft, The Netherlands
Carlos Peralta, University of Brighton, UK
Cameron Tonkinwise, Carnegie Mellon University, US

Conference Experience Chairs
Dan Lockton, Royal College of Art, UK
Veronica Ranner, Royal College of Art, UK

PhD by Design
Bianca Elzenbaumer, Leeds College of Art, UK
Maria Portugal, Goldsmiths University, UK
Alison Thomson, Goldsmiths University, UK

DRS Special Interest Group Chairs
Erik Bohemia, Loughborough University, UK
Rebecca Cain, Warwick University, UK
Hua Dong, Tongji University, China
Tom Fisher, Nottingham Trent University, UK
Sarah Kettley, Nottingham Trent University, UK
Kristina Niedderer, University of Wolverhampton, UK
Nithikul Nimkulrat, Estonian Academy of Arts, Talinn
Michael Tovey, Coventry University, UK
Rhoda Trimmingham, Loughborough University, UK

Executive Advisors
Carl DiSalvo, Georgia Institute of Technology, US
Kees Dorst, University of Technology, Sydney, Australia
Janet Mcdonnell, University of the Arts London, UK
Johan Redström, Umeå Institute of Design, Sweden
Erik Stolterman, Indiana University, US
Anna Valtonen, Aalto School of Arts, Design and Architecture, Finland
International Board of Reviewers

Tom Ainsworth, University of Brighton, United Kingdom
Katerina Alexiou, The Open University, United Kingdom
Manola Antonioli, Ecole Nationale Supérieure d'Architecture Paris La Villette, France
Rina Arya, Wolverhampton, United Kingdom
Harriet Atkinson, University of Brighton, United Kingdom
Stephen Awoniyi, Texas State University, United States
Jeremy Aynsley, University of Brighton, United Kingdom
Leonard Bachman, University of Houston College of Architecture, United States
Betsy Barnhart, Iowa State University, United States
Giovanni Baule, Politecnico di Milano, Italy
Nigan Bayazit, Istanbul Technical University, Turkey
Michaël Berghman, TU Delft, Netherlands
Tracy Bhamra, Loughborough University, United Kingdom
Richard Bibb, Loughborough University, United Kingdom
Noemi Bitterman, Technion, Israel
Ali Black, Reading University, United Kingdom
Janneke Blijlevens, Royal Melbourne Institute of Technology University, Australia
Anne Boddington, University of Brighton, United Kingdom
Stella Boess, Delft University of Technology, Netherlands
Erik Bohemia, Loughborough University, United Kingdom
Casper Boks, NTNU, Norway
Elizabeth Boling, Indiana University, United States
Andy Boucher, Goldsmiths, University of London, United Kingdom
Simon Bowen, Newcastle University, United Kingdom
Stephen Boyd Davis, Royal College of Art, United Kingdom
Jamie Brassett, Central Saint Martins, United Kingdom
Philip Breeden, Nottingham Trent University, United Kingdom
Charlie Breindahl, Royal Danish Academy of Fine Arts, Denmark
Patrick Bresnihan, Trinity College Dublin, Ireland
Cheryl Buckley, University of Brighton, United Kingdom
Jacob Buur, University of Southern Denmark, Denmark
Rebecca Cain, University of Warwick, United Kingdom
Elena Caratti, Politecnico di Milano, Italy
Philip Cash, DTU, Denmark
Tom Cassidy, University of Leeds, United Kingdom
Julia Cassim, Kyoto Institute of Technology, Japan
Jonathan Chapman, University of Brighton, United Kingdom
Chien-Hsiung Chen, Taiwan Tech, Taiwan, R.O.C.
Chun-Chih Chen, National Kaohsiung Normal University, Taiwan, R.O.C.
Chun-Di Chen, National Taipei University of Education, Taiwan, R.O.C.
Kuohsiang Chen, I-Shou University, Taiwan, R.O.C.
Lin-Lin Chen, National Taiwan University of Science and Technology, Taiwan, R.O.C.
Peter Childs, Imperial College London, United Kingdom
Wen-Ko Chiou, Chang Gung University, Taiwan, R.O.C.
Bo Christensen, Copenhagen Business School, Denmark
Henri Christiaans, UNIST, School of Design & Human Engineering, South Korea
Abdussalam Selami Cifter, Mimar Sinan Fine Arts University, Turkey
Nazli Cila, Amsterdam University of Applied Sciences, Netherlands
Mollie Claypool, University College London, United Kingdom
Stephen Clune, Lancaster University, United Kingdom
Tim Cooper, Nottingham Trent University, United Kingdom
Anne Cranny-Francis, University of Technology Sydney, Australia
Nathan Crilly, University of Cambridge, United Kingdom
Odette da Silva, TU Delft, Netherlands
Massimo De Angelis, University of East London, United Kingdom
Michel de Blois, Université Laval, Canada
Cees de Bont, Hong Kong Polytechnic University, Hong Kong
Christine de Lille, Delft University of Technology, Netherlands
Jakki Dehn, Jakki Dehn Materials, United Kingdom
Val Mitchell, Loughborough University, United Kingdom
Kathryn Moore, Birmingham City University, United Kingdom
Michael Moore, Ulster University, United Kingdom
Sarah Morehead, Northumbria University, United Kingdom
Nicola Morelli, Aalborg University, Denmark
Mariale Moreno, Cranfield University, United Kingdom
Andrew, Morrison, AHO, Norway
Jeanne-Louise Moys, Reading University, United Kingdom
Tara Mullaney, Umeå Institute of Design, Sweden
Yukari Nagai, Japan Advanced Institute of Science and Technology, Japan
Ki Young Nam, KAIST, South Korea
Kristina Niedderer, Wolverhampton University, United Kingdom
Liv Merete Nielsen, Oslo and Akershus university college, Norway
Nithikul Nimkulrat, Estonian Academy of Arts, Estonia
Conall Ó Catháin, Past Chairman DRS, Ireland
Arlene Oak, University of Alberta, Canada
Maya Oppenheimer, Royal College of Art, United Kingdom
Elif Ozcan, Delft University of Technology, Netherlands
Kursat Ozenc, Stanford, United States
Verena Paepcke-Hjeltness, Iowa State University, United States
Eujin Pei, Brunel University London, United Kingdom
Carlos Peralta, University of brighton, United Kingdom
José Pérez de Lama, University of Sevilla, Spain
Oscar Person, Aalto University, Finland
Ann Petermans, Hasselt University, Belgium
Daniela Petrelli, Sheffield Hallam University, United Kingdom
Doina Petrescu, The University of Sheffield, United Kingdom
Ida Nilstad Pettersen, Norwegian University of Science and Technology (NTNU), Norway
Sarah Pink, RMIT University, Australia
Silvia Pizzocaro, Politecnico di Milano, Italy
Philip Plowright, Lawrence Technological University, Universidad de Castilla-La Mancha, United States
Anna Pohlmeier, Delft University of Technology, Netherlands
Tiiu Poldma, University of Montreal, Canada
Ruben Post, TU Delft, Netherlands
William Prindle, Iowa State University, United States
Charlie Ranscombe, Swinburne, Australia
Yaone Rapitsenyane, University of Botswana, Botswana
Ingo Rauth, Chalmers University of Technology, Sweden
Kirstine Riis, University College Telemark, Norway
Paul Rodgers, Northumbria University, United Kingdom
Zoe Romano, WeMake, Makerspace, Italy
Jose Antonio Rosa, Iowa State University, United States
Seymour Roworth-Stokes, Coventry University, United Kingdom
Robin Roy, The Open University, United Kingdom
Keith Russell, University of Newcastle, Australia, Australia
Daniel Saakes, KAIST, South Korea
Noemi Maria Sadowska, Regent's University London, United Kingdom
Miguel Said Vieira, Independent, Brazil
Fatina Saikaly, Co-Creando, Italy
Filippo Salustri, Ryerson University, Canada
Liz Sanders, The Ohio State University, United States
Rick Schiffrstein, TU Delft, Netherlands
James Seif, UNIST, South Korea
Nick Senske, Iowa State University, United States
Matt Sinclair, Loughborough University, United Kingdom
Kin Wai Michael Siu, The Hong Kong Polytechnic University, Hong Kong
Dirk Snelders, TU Delft, Netherlands

Editorial......................................................................................................................................................... I

– Volume 1 –

SECTION 1
50 YEARS OF DESIGN RESEARCH

Design Research: What is it? What is it for?........................................................................................................ 5
Victor Margolin

Schön’s Legacy: Examining Contemporary Citation Practices in DRS Publications .............................................. 17
Jordan Beck, Laureline Chiapello

The Idea of Architecture, The User As Inhabitant: Design through a Christopher Alexander Lens ...................... 31
Molly Wright Steenson

Design Research for Sustainability: Historic Origin and Development ............................................................. 43
Astrid Skjerven

The Design Methods Movement: From Optimism to Darwinism ...................................................................... 51
John Z. Langrish

User Design: Constructions of the “user” in the history of design research ..................................................... 65
Theodora Vardoulis

60 years of creativity in business organizations .............................................................................................. 83
Ricardo Sosa, Pete Rive and Andy M. Connor

20th Century Boys: Pioneering British Design Thinkers .................................................................................. 97
Emma Murphy and Martyn Evans

Design Research and Design Participation ..................................................................................................... 111
Robert Aish

The Design Research Society in the 1980s and 1990s: a memoir .................................................................... 125
Conall Ó Catháin

SECTION 2
AESTHETIC PLEASURE IN DESIGN

Introduction: Aesthetic Pleasure in Design ........................................................................................................ 139
Michaël Berghman and Paul Hekkert

Measuring design typicality – a comparison of objective and subjective approaches .................................... 145
Stefan Mayer and Jan R. Landwehr

Most Advanced yet Acceptable: A case of referential form-driven meaning innovation ............................... 157
Seong geun Lee, James Self and Ekaterina Andriect

Extracting Design Aesthetic Heuristics from Scientific Literature ................................................................ 179
Ana Cadavid, Stefany Ruiz-Córdoba and Jorge Maya

Putting product design in context: Consumer responses to design fluency as a function of presentation context .......................................................... 203
Laura K. M. Graf and Jan R. Landwehr

The Value of Transparency for Designing Product Innovations .................................................................. 215
Peiyao Cheng and Ruth Mugge

A comparison between colour preference and colour harmony – taking athletic shoe design as an example ...... 233
Li-Chen Ou

Creating Novel Encounters with Nature: Approaches and Design Explorations ............................................ 245
Thomas J. L. Van Rompay and Geke D. S. Ludden

Introducing Experience Goals into Packaging Design .................................................................................... 259
Markus Joutsela and Virpi Roto

The beauty of balance – An empirical integration of the Unified Model of Aesthetics for product design ....... 277
Michaël Berghman and Paul Hekkert

SECTION 3
DESIGN EPISTEMOLOGY

Introduction: Design Epistemology ................................................................................................................... 295
Derek Jones, Philip Plowright, Leonard Bachman and Tiiu Poldma

Mapping design knowledge: 36 years of Design Studies .............................................................................. 303
Kathryn Burns, Jack Ingram and Louise Annable

I know this one, but the answer is complex ..................................................................................................... 321
Simon Downs

Source domains of Architectural Knowledge: Mappings, Categories, Validity and Relevance ...................... 339
Philip D Plowright

Danny Godin

Design Fiction: Does the search for plausibility lead to deception? ............................................................. 369
Paul Coulton, Joseph Lindley and Haider Ali Akmal
Graphicality: why is there not such a word? ........................................................................................................ 385
Robert Harland and David Craib
Design as Anticipation and Innovation: Co-creating a future by learning from the future as it emerges .................................................. 401
Markus F. Peschl and Thomas Fundneider

— Volume 2 —

SECTION 4

Design EDUCATION AND LEARNING

Introduction: Design Education and Learning ........................................................................................................ 419
Michael Tovey
“Dis-course is Killer!” Educating the critically reflective designer ........................................................................ 425
Veronika Kelly
Design Culture and Contemporary Education ......................................................................................................... 441
Therese Uri
Promoting an emancipatory research paradigm in Design Education and Practice .................................................. 455
Lesley-Ann Noel
Design Thinking: A Rod For Design’s Own Back? ..................................................................................................... 471
Ayse Ghassan
Designing the unknown: supervising design students who manage mental health issues ...................................... 483
Welby Ings
Using Design Thinking to create a new education paradigm for elementary level children for higher student engagement and success 501
Lesley-Ann Noel and Tsai Lu Liu

Design Research in Interior Design Education: A Living Framework for Teaching the Undergraduate Capstone Studio in the 21st Century ........................................................................................................ 513

Charles Boggs, Helena Moussatche, Catherine Pizzichemi and Meghan Woodcock
Designing Universities of the Future ......................................................................................................................... 525
Anna Valtonen
Design Futures: A Pedagogy for Long-Horizon Design Scenarios ........................................................................ 539
Peter Scupelli, Arnold Wasserman, and Judy Brooks
Design and Interdisciplinarity: the improbable introduction of “fundamental physics” in a design school .......... 555
Annie Gentes, Anne-Lyse Renon and Julien Bobroff
Card Games Creation as a Learning Method ............................................................................................................ 569
Birgit S. Bauer

“Spend another day in our class talking about this research please”: Student insights from a research-based design thinking exercise 593
Cynthia J. Atman, Arif Ahmer, Jennifer A. Turns and Jim Borgford-Parnell

Communication is not collaboration: observations from a case study in collaborative learning ........................................... 609
Iestyn Jowers, Mark Gaved, Gary Elliott-Cirigottis, Delphine Dallison, Alan Rochead and Mark Craig

The use of argumentation in design research .............................................................................................................. 625
Stella Boess
Digital Sketch Modelling: Integrating digital sketching as a transition between sketching and CAD in Industrial Design Education ................................................................................................................. 637
Charlie Ranscombe and Katherine Bissett-Johnson

Prototyping in the in-between: A Method for Spatial Design education ...................................................................... 653
Jennie Andersson Schaeffer and Marianne Palmgren

Global Flows of Materials: Design Research and Practice in Architecture ........................................................................ 669
Janet McGaw

Evaluating Living and Learning on Campus: A Community Engaged Research Model ........................................... 685
Rebekah Radtke

What is sought from graphic designers? A first thematic analysis of job offers for graphic design positions in the United Kingdom ................................................................................................................ 705
Paulo Roberto Nicoletti Dziobczenskiand Oscar Person

LIVD: An Avant-Garde Publication with Pedagogical and Epistemological Aims ...................................................... 719
Meredith James

Design Studio Desk and Shared Place Attachments: A Study on Ownership, Personalization, and Agency .................. 729
Peter Scupelli and Bruce Hanington

Online Reflective Interactions on Social Network Sites in Design Studio Course ........................................................................ 751
Simge Hough

Junior designers’ awareness of personal values and their employment choices ...................................................... 767
Anna Jonkmans, Julia Wuri, Dirk Snelders and Lenny van Onselen

Knowledgeability culture: Co-creation in practice ........................................................................................................ 781
Alicen Coddington, Colin Giang, Alexander Graham, Anne Prince, Pauliina Mattila, Christine Thong and Anita Kocsis

Visual Thinking Styles and Idea Generation Strategies Employed in Visual Brainstorming Sessions ...................... 795
Nazi A.G.Z. Börekçi

The Future of Product Design Utilising Printed Electronics ............................................................................................. 813
Nicola York, Darren South and Mark Evans
– Volume 3 –

SECTION 5

AESTHETICS, COSMOPOLITICS AND DESIGN

Introduction: Aesthetics, Cosmopolitics and Design .......................................................... 873
Alex Wilkie

Framing Values in Design ................................................................................................. 881
Marta Gasparin and William Green

The Prototype as a Cosmopolitan Place: Ethnographic design practice and research at the National Zoo .......................................................... 895
Martin Tironi, Pablo Hermansen and José Neira

The Role of Participation in Designing for IoT ................................................................ 913
Anuradha Reddy and Per Linde

Aesthetics, Cosmopolitics and Design Futures in Computational Fashion .................... 927
Laura Forlano

Designing diagrams for social issues ........................................................................... 941
Michele Mauri and Paolo Ciuccarelli

iPhoneography and New Aesthetics: The Emergence of a Social Visual Communication Through Image-based Social Media ................................. 959
Eman Alshawaf

A Creative Ontological Analysis of Collective Imagery during Co-Design for Service Innovation ................................................................. 969
Priscilla Chueng-Nainby, John Lee, BingXin Zi and Astury Gardin

Post-critical potentials in experimental co-design ....................................................... 985
Sissel Olander

Collaborative Imaging. The communicative practice of hand sketching in experimental physics .................................................................................. 997
Judith Marlen Dobler

The Aesthetics of Action in New Social Design ............................................................... 1013
Ilpo Koskinen

Designing Debate: The Entanglement of Speculative Design and Upstream Engagement ............................................................................. 1025
Tobie Kerridge

SECTION 6

DESIGN AND TRANSLATION

Introduction: Design and Translation .............................................................................. 1039
Giovanni Baule and Elena Caratti

Towards Translation Design: A New Paradigm for Design Research ............................. 1047
Giovanni Baule and Elena Caratti

Design as translation activity: a semiotic overview ...................................................... 1061
Salvatore Zingale

Word to Image – Image to Word The Contribution of Visual Communication to Understanding and Dialog .......................................................... 1073
Michael Renner

Perception, Meaning and Transmodal Design ................................................................ 1089
Mathias Nordvall and Mattias Arvola

The Ways of Synesthetic Translation: Design models for media accessibility .............. 1101
Dina Ricco

The narratives and the supports. Remediating Design Culture in the translation of transmedia artefacts ................................................................. 1111
Matteo Ciastellardi and Derrick de Kerckhove

Rules of Thumb: An Experiment in Contextual Transposition ....................................... 1123
Damon Taylor, Monika Büscher, Lesley Murray, Chris Speed and Theodore Zamenopoulos

Juxtaposing Chinese and Western Representational Principles: New Design Methods for Information Graphics in the Field of Intercultural Communication .............................................................. 1139
Ruedi Baur and Ulrike Felsing

Elucidating perceptions of Australian and Chinese industrial design from the next generation of industrial designers ....................................... 1163
Blair Kuys and Wenwen Zhang

Translating picturebooks: Re-examining interlingual and intersemiotic translation ..................................................................................... 1179
Anne Ketola

Long Kesh: Site - Sign - Body .......................................................................................... 1191
Ola Ståhl
SECTION 7
DESIGN FOR DESIGN – THE INFLUENCE AND LEGACY OF JOHN HESKETT

Introduction: Design for Design The Influence and Legacy of John Heskett .......................................................... 1205
Tore Kristensen and Sylvia Liu
Doing qualitative studies, using statistical reasoning .................................................................................................. 1211
Gorm Gabrielse and Tore Kristensen
Design as Driver for Understanding Sustainability and Creating Value in the Fur Industry ......................................... 1223
Irene Alma Lenne, Else Skjold
Design Awareness: Developing Design Capacity in Chinese Manufacturing Industry .................................................. 1237
Sylvia Liu
Design Expanding into Strategy: Evidence from Design Consulting Firms ................................................................. 1253
Suzan Boztepe

– Volume 4 –

SECTION 8
Design for Behaviour Change

Introduction: Design for Behaviour Change .............................................................................................................. 1271
Kristina Niedderer, Geke Ludden, Rebecca Cain, Andrew Morris and Aija Freimane
An alternative approach to influencing behaviour: Adapting Darnton’s Nine Principles framework for scaling up individual upcycling ........................................................................................................ 1277
Kyungeun Sung, Tim Cooper and Sarah Kettlely
Assessment of the Co-creative Design Process ........................................................................................................ 1291
Pratik Vyas, Robert Young, Petia Sice and Nicholas Spencer
The potential of Design for Behaviour Change to foster the transition to a circular economy ...................................... 1305
Laura Piscicelli and Geke Dina Simone Ludden
Developing a theory-driven method to design for behaviour change: two case studies ............................................. 1323
Anita Van Essen, Sander Hermesen and Reint Jan Renes
What a designer can change: a proposal for a categorisation of artefact-related aspects ........................................... 1339
Anneli Selvefors, Helena Strömberg and Sara Renström
Exploring and communicating user diversity for behavioural change ........................................................................... 1357
Aykut Coskun and Cigdem Erbug
How I learned to appreciate our tame social scientist: experiences in integrating design research and the behavioural sciences.......................................................................................................................... 1375
Sander Hermesen, Remko van der Lugt, Sander Mulder and Reint Jan Renes
A Design Approach for Risk Communication, the Case of Type 2 Diabetes .............................................................. 1390
Farzaneh Eftekhari and Tsai Lu Liu
Metadesigning Design Research – How can designers collaboratively grow a research platform? .......................... 1412
Mathilda Tham, Anna-Karin Arvidsson, Mikael Blomqvist, Susanne Bonja, Sara Hyltén-Cavallius, Lena Håkansson, Miguel Salinas, Marie Sterte, Ola Ståhl, Tobias Svensén and Ole Victor

SECTION 9
Design for Health, Wellbeing and Happiness

Introduction: Design for Health, Wellbeing and Happiness ......................................................................................... 1434
Rebecca Cain, Noemi Bitterman, Geke Ludden, Jamie Mackrill, Elif Ozcan, Ann Petermans and Carolina Escobar-Tello
In the moment: designing for late stage dementia ......................................................................................................... 1442
Cathy Treadaway, David Pytherch, Gail Kenning and Jac Fennell
Design for Ageing-in-place: Evidence from Australia .................................................................................................. 1458
Naseem Ahmadpour and Alen Keirnan
Supporting healthy behaviour: A stages of change perspective on changing snacking habits of children ..................... 1473
Geke D.S. Ludden and Laura H.J. de Ruijter
Co-creating narratives: an approach to the design of interactive medical devices, informed by phenomenology .......... 1487
Rowan Page and Mark Richardson
A Design Primer for the Domestication of Health Technologies .................................................................................. 1499
Paul Chamberlain and Claire Craig
Disentangling complexity: a visualisation-led tool for healthcare associated infection training ................................. 1515
Alastair S. Macdonald, David Loudon, Susan Wan and Colin Macduff
Exploring Design for Happiness in the Home and Implications for Future Domestic Living ...................................... 1529
Emily Corrigan-Doyle, Carolina Escobar-Tello and Kathy Pui Ying Lo
Using symbolic meaning as a means to design for happiness: The development of a card set for designers ............ 1553
Mafalda Casais, Ruth Mugge and Pieter M. A. Desmet
Designs with benefits: hearth fire nights and bittersweet chores ................................................................................. 1573
Stella U. Boess and Anna E. Polhemeyer
Happy moments: A well-being driven design of a Car2Go ........................................................................................ 1589
Tessa Duste, Pieter Desmet and Elmer van Grondelle
Could LEGO® Serious Play® be a useful technique for product co-design?

Riding Shotgun in the Fight Against Human Trafficking

A case based discussion on the role of Design Competences in Social Innovation

Provocative design for unprovocative designers: Strategies for triggering personal dilemmas

Of Open bodies: Challenges and Perspectives of an Open Design Paradigm.

Integrating Nanotechnology in the Design Process: An Ethnographic Study in Architectural Practice in Egypt

Form as an abstraction of mechanism

Games as Speculative Design: Allowing Players to Consider Alternate Presents and Plausible Futures

Introduction: Design Innovation Management

Emerging Trends of Design Policy in the UK

Resourcing in Co-Design

From Participation to Collaboration: Reflections on the co-creation of innovative business ideas

Bridging service design with integrated co-design decision maker interventions

Exploring framing and meaning making over the design innovation process

The making of sustainable cultural and creative cluster in Hong Kong

An exploration of Service Design Jam and its ability to foster Social Enterprise

Fiction as a resource in participatory design

Space as organisational strategy

The value of design: an issue of vision, creativity and interpretation

A Multilevel Approach to Research ‘Obscure’ Innovation Processes and Practices

Coordinating product design with production and consumption processes

How Companies adopt different Design approaches

Challenges in co-designing a building

SECTION 12
DESIGN PROCESS

Form as an abstraction of mechanism

Integrating Nanotechnology in the Design Process: An Ethnographic Study in Architectural Practice in Egypt

Of Open bodies: Challenges and Perspectives of an Open Design Paradigm.

Provocative design for unprovocative designers: Strategies for triggering personal dilemmas

A case based discussion on the role of Design Competences in Social Innovation

Riding Shotgun in the Fight Against Human Trafficking

Could LEGO® Serious Play® be a useful technique for product co-design?
Intuitive Interaction research – new directions and possible responses. ................................................. 2065
Alethea Blackler and Vesna Popovic

Skilling and learning through digital Do-It-Yourself: the role of (Co-)Design ........................................... 2077
Giuseppe Salvia, Carmen Bruno and Marita Canina

Design Research, Storytelling, and Entrepreneur Women in Rural Costa Rica: a case study ....................... 2091
Maria Gabriela Hernandez

Temporal design: looking at time as social coordination ........................................................................... 2109
Larissa Pshetzh, Michelle Bastian and Chris Speed

A Physical Modeling Tool to Support Collaborative Interpretation of Conversations ............................... 2123
Piotr Michura, Stan Ruecker, Celso Scalelsky, Guilherme Meyer, Chiara Del Gaudio, Gerry Derksen, Julia Dias, Elizabeth Jeremeg, Juan de la Rosa, Xinyue Zhou and Priscilla Ferronato

SECTION 13 DESIGN INNOVATION FOR SOCIETY

Introduction: Design Innovation for Society .............................................................................................. 2143
Nynke Tromp and Mieke van der Bijl-Brouwer

The Challenges of Human-Centred Design in a Public Sector Innovation Context ....................................... 2149
Mieke van der Bijl-Brouwer

Activating the core economy by design ....................................................................................................... 2165
Rebeca Torres Castanedo and Paul Micklethwait

On presenting a rich picture for stakeholder dialogue ................................................................................ 2183
Abigail C. Durrant, Wendy Moncur, David S. Kirk, Diego Trujillo Pisanty and Kathryn Orzech

Design and the Creation of Representational Artefacts for Interactive Social Problem Solving .................... 2203
Richard Cooney, Nifeli Stewart, Tania Ivanova and Neal Haslem

INCLUSIVE DESIGN
Introduction: Inclusive Design

Hua Dong
Tongji University
DOI: 10.21606/drs.2016.610

The Inclusive Design Research Special Interest Group (Inclusive SIG) of the Design Research Society provides an international platform for researchers, design practitioners, and the general public to exchange knowledge about accessible and attractive design and to empower wider participation in the design process.

The main foci of the Inclusive SIG include:

- Building and advancing knowledge for inclusive design and research
- Creating and evaluating tools and methods for inclusive design practice
- Developing strategies for engaging designers and the public
- Exploring new territories of inclusive design for the majority world
- Through these activities, we aim:
  - To share best practice in contemporary design, research, education, and public engagement
  - To keep pushing the boundaries of inclusive design and explore its potential in different contexts

As one of the special interest groups of the Design Research Society (DRS), Inclusive SIG organizes symposia on a regular basis, and the inclusive design session for the 2016 DRS received 18 papers, in addition to the relevant submissions from the open call. Following a thorough review process and strict selection criteria, 11 papers were selected for presentation at the conference. These papers cover a diverse range of topics, from redefining ageing, measuring user capabilities, to assessing product-related stigma.

For example, the paper ‘Designing for older people: But who is an older person?’ by Raghavendra et al. from University of Canberra, Australia, addresses one of the critical aspects of inclusive design discourses, i.e. the definition of ageing. It reports the experiment investigating if redundancy in interface design can facilitate intuitive use in older users and
users with low technological prior experience. The findings proved that diversity in older age groups presents a great challenge in developing intuitively usable interfaces. The research suggests that looking at a target group based on their cognitive abilities instead of chronological age will provide an much more effective approach in dealing with this challenge.

Understanding user capability has been a topic for inclusive design for many years; the main challenges include: lack of appropriate definition of product-design related capabilities or related measurement scales and methods. The paper ‘Towards designing inclusion: insights from a user data collection study in China’ by Ning and Dong from Tongji University, has attempted to collect user data of 130 older persons in China, covering many areas of competence, from the more quantitative domain of biomechanics, interaction, to more subjective and qualitative areas (e.g. comfort). As a pilot study in collecting Chinese older people’s capabilities in relation to product use, the study explores the relation between ‘maximum’ and ‘comfortable’ capability measurements, and verifies the feasibility of establishing predictive models of successful product interactions in the 50-70 user group. This study has provided promising directions for further exploration of user data.

With increasing longevity and changes in population demographics; designers, engineers and architects are faced with the challenge of providing older adults with enabling technologies and home environments that facilitate physical activity and wellbeing. For instance, there is an overall theme that older people encounter difficulty in opening household packaging for a variety of reasons. Ma and Dong’s paper reports upon a survey-based investigation into such difficulties encountered by older Chinese individuals. The paper not only identifies difficult packaging types from the older users’ perspectives, but also tackles the problem by considering several critical design research areas such as user participation in the design process, end user acceptance, decision-making and inclusion.

Lim and Nevay from the University of Dundee also focuses on the design process. Their paper reports a co-design project, involving care-home residents, to address the issue of acceptance and adoption of wearable technologies for older adults to monitor their activities and movements. It describes a ‘craft-based’ approach ‘to allow designers to understand and uncover people’s capabilities and needs in a non-intrusive and empathic way’. The paper raises, at the outset, the issue of non-compliance of current wearable technologies, and posits that co-design of these with older adults - through a ‘crafting’ process - will provide a greater sense of ownership and acceptability of designs. The authors’ particular emphasis is on the ‘crafting’ of these artefacts, suggesting this is being led by ‘non-techies’ which may prove of significance in the design of acceptable technologies.

Dijk and Verhoeven’s paper ‘to shed some light on empowerment: towards designing for embodied functionality’ uses a participatory design project to examine whether an interactive lighting system could empower a person with autism by supporting domestic activities. Reflecting on the case the authors develop the vision of Embodied Functionality (EF) and argue that designing for EF goes beyond ‘distributing’ information technology in the
environment and opens up an alternative design space, holding the promise of a more successful appropriation of interactive (assistive) products into people’s everyday lives.

Stigma is a subject frequently discussed within the field of inclusive design, however measurement of this trait is under-explored. The paper ‘Product stigmaticity: measuring product-related stigma’ (by Kristof Romain Viktor Vaes, Pieter Jan Stappers, Achiel Standaert) presents two measuring techniques that aim to objectively assess the ‘degree’ of ‘product-related stigma’ (PRS) that is ‘attached’ to products. It is argued that both experimental techniques are predominantly suited as comparison tools, able to compare products on their PRS-eliciting potential. It is expected that designers and developers to use these results to justify design decisions with quantitative data, to assess which product properties have influenced certain reactions, and to what extent subsequent improvements have been successful.

The selected papers not only address the traditional dimensions of inclusive design, i.e. young-old, able-disable, professional-lay, but also raise emerging topics such as participatory action and the cultural aspect of inclusive design.

Through case study analysis, Nicola St John’s paper ‘Towards more culturally inclusive communication design practices: exploring creative participation between non-Indigenous and Indigenous people in Australia’ explores and discusses a more culturally inclusive communication design practice particularly in relation to framing a process for creative participation and creation between Non-Indigenous and Indigenous people within Australia. It draws from and applies principles of Transformative Participatory Action research to communication design practice. This approach moves away from co-design and participatory design models to focus more on participatory action, active engagement and empowering Indigenous communities through design.

Zhao Chao, Popovic Vesna and Lu Xiaobo’s paper ‘Designing meaningful vehicles for older users: culture, technology, and experience’ investigates Chinese middle-aged vehicle users and older vehicle users pertinent to their current travel experience and future travel needs. The study utilizes grounded theory to analyze the travel activities of two age cohorts and compare the travel-needs-influencing factors. The researchers have adapted technique of interviews, logbook and co-discovery to help collect data and explore these factors within the Chinese cultural frameworks. The study contributes to a framework and method for automotive designers to incorporate user feedback in a human-centered design process, aiming at designing vehicles that are both meaningful, functional and locally relevant for an aging population in China.

Grangaaard’s paper ‘Towards an innovative and inclusive architecture’ describes a study investigating how architectural firms and organizations related to disability in the built environment perceive and work with the Danish Building Regulations Accessibility Requirements. It discusses about accessibility regulations, in particular the challenges they present by forcing the firms to consistently meet the prescribed requirements as opposed to
the behavioural/experiential needs of the users, when not all users have the same accessibility needs.

David Fassi, Laura Galluzzo and Liat Rogel report a series of design interventions that open up the Bovisa Campus of the Politecnico di Milano as a hidden space to its surrounding communities, aiming at making normally hidden marginalized public spaces within a university campus accessible to the wider community. The paper presents a means of engaging students in future thinking and how design and design education might play a more active role in enabling such practices to be more systematically developed through a series of social activities, highlighting how design research as a creative and active force invites reconsideration of ideas about design and its role in shaping our lives in more expansive ways.

With these interesting papers addressing inclusivity from a variety of perspectives, I expect that the Inclusive Design session to provide an inspirational form for discussion and debate. For example, although engaging users creatively in the design process could help increase the sense of ownership of the participants, thus increasing the acceptance of the final design, with designers being knowledge users of inclusive design knowledge, there is a challenge yet to be addressed, i.e. how such user data would be made available, accessible and attractive to designer practitioners to exploit. We hope participants will share experience and good practice and help move the field forward.
Hidden public spaces: when a university campus becomes a place for communities

Davide Fassi*, Laura Galluzzo and Liat Rogel

Politecnico di Milano
* davide.fassi@polimi.it
DOI: 10.21606/drs.2016.377

Abstract: “C’è spazio per tutti/There’s room for one more” is an event that took place in November 2011 at the Milano Bovisa Durando campus of Politecnico di Milano, Italy with the purpose of opening up the public spaces of the university to the inhabitants of that area through a series of design actions to offer opportunities for understanding, observation and enjoyment of a public space. That was the beginning of a series of design for social innovation projects connected to the Bovisa neighbourhood organized over the following years. In this paper we will describe the need to open-up hidden (unknown) public spaces like the Milano Bovisa Durando campus and the idea that through small rapid design experiments we can immediately test the efficacy of tools made to enable people’s and communities’ use of the public space.

Keywords: Hidden public space, Toolkit, Communities, University campus

1. Introduction

1.1 The city and the need for communities.

The activity of communities in public spaces is a key feature of moving towards a more sustainable way of living in the urban area. It is not surprising that the city has been a favourite discussion topic (for bad or good) in the recent years, and for a good reason: the world’s population is becoming concentrated in urban areas; therefore, taking care of the city means taking care of large numbers of people. The common image of the expanding city, however, is far from ideal. The most frequent words describing urban realities are: social exclusion, alienation, segregation and loneliness. More than a crisis of the city we should rather talk about a crisis of city life. Globally, cities are growing, changing and developing, and international metropolises share more features than they do with their local contexts (Sassen, 2004). It has been clear for some time now that new development
strategies are needed, but: where to begin? In the United States many authors have criticized urban planning processes and accused them of not considering the residents’ needs, some offering concrete solutions and alternatives. In 1970, Richard Sennet (Sennet, 1970) wrote about the crisis of the city, introducing an idea that differed from that of Jane Jacobs in “The Death and Life of Great American Cities” (Jacobs, 1961). Jacobs, he says, is nostalgic about the past and the relationships between people in small towns; she tends to suggest a restoration of past conditions. Sennet (1970) states we can not think that the past can give us elements to improve our present city problems, as the solutions we want must be adapted to an affluent, technological era. The answer is probably to be found between these two arguments, or perhaps they are not so far away from each other to begin with. They both conclude that communities must have a need for, and the will to re-reach some values that have been lost in modern urban life, such as mutual support and conviviality. Although written some years ago, these books still represent important and contemporary criticisms of today’s urban planning. More and more people in cities are finding creative ways of refilling those gaps. They collaborate in various ways using new and old tools. These creative communities (Meroni, 2007) are producing social innovation. They are a sustainable resource that must not only be recognized but also supported and disseminated. According to Manzini (2015), “social innovations are solutions based on new social forms and economical models. They are those social changes towards sustainability when they can reduce the environmental impact, regenerate common goods and social fabric”. These innovations often deal with public space because communities often act in and for public space. What kind of public spaces and how they are connected with the university realm is the key issue to be discussed in the next paragraph.

3.2 Space for urban communities
Independent events have started to grow in the city, in those areas where there are particular problems which are shown by increasing the consciousness of the residents (Bostjan, 2010:22). The city is read as an independent container of public spaces even if, according to Rem Koolhas, the distinction between public and private is nowadays outdated. We are faced with residual spaces, abandoned and not controlled. Giovanna Piccinno in Space Design (Piccinno, 2008, p.11) says that “[…] the contemporary designer must listen to new places (without distinction between places and non-places) and new citizens (local or itinerant) and answer in terms of design with the operative tools he has.[...].”. The action is generally done in places which are not offered freely or donated, but, on the contrary, are lent or temporarily given for a specific use (Haydn and Temel, 2006). And we are not only talking about those places recognized as possible sites for temporary urban solutions (Fassi, 2012)¹ (squares, parks, stadiums), but about those areas at the margins, which have been

¹ “Temporary urban solutions” (TUS) are project answers put in place by professionals in a sector or by groups of people lead by a team of project specialists, which change into devices, set up, collective actions, emergency displays, project strategies which contaminate the single building, an agglomerate of them, a urban interior or an open space or a passage space with a
stolen from an inattentive urban planning project or infrastructures that do not enter into
dialogue with their context (Navarra, 2008). Or it is the “space of abandonment” as the
“Stalker” group defined it (Careri, 2006), which is a space “where complexity survives to the
mono-functional colonization and the city experiments generating a neutral area which gives
back a sense of concept to public space as a creative space and sharing space” (Romolo,
2005, p.18). Luciano Crespi (Crespi, 2009, p.20) says that the “true act of recognition of the
place is only through the presence on the place itself, within the internal and external areas,
whose changes need to be foreseen. Where staying means something deeper than stopping
for a moment or being there by chance. Staying means the need to understand, to listen to
the place, to recognize the soul” in the sense provided by Hillman (2004). The sense of
ownership of space reflects the reading of the city as a “place of self-identification of the
individual” which, according to Barcellona (Barcellona, 2006, p.17) “is possible through the
personalization of the urban space which is at the same time the structured image of values
and community bonds and the place of distinction for the relationship between single and
community”. Feeling an urban space means perceiving a shape of what is empty and what is
full, of high and low spaces, above and below spaces, but also recognizing a system of
relationships between the people who live in these spaces, the neighborhood, the life in the
residential areas, true centres of communication (Barcellona, 2006, p.17).

As Francesca Zajczyk states, the neighborhood is a portion of an urban area, both physical
and social, where plenty of resources, factors and critical situations can be found. It
underlines the identification with the local side of the city, is able to read the micro-social
dynamics and to express the relationship among citizens/social groups and urban areas
(Zajczyk, 2008).

2. Hidden public spaces

Sometimes public space is not obvious. When the borders between private and public are
blurred, new kind of spaces are born that even if they belong to everyone they are not
visually public. These are public spaces we define as ‘hidden’. Traditional houses and
apartment blocks in Milan were designed to have an inner courtyard that generally gave
access to other buildings inside, but is not seen from the outside. These courtyards have
direct access from the streets that brings the user to a semi-private area. It means they are
open to the public even if they belong to a private property. It is this feature that makes
them hidden places, since citizens, tourists or casual passers-by are not directly aware of
them and could only discover them if needing access. This courtyard distribution system
comes from the farmhouses (“cascina”), a traditional system of buildings, now found only in

---

1 “Infrastructures compose an articulate vocabulary of shapes which defining the covered spaces with a variable height,
interfere with the urban network. Thus there are some special points which form residual spaces, not accessible to cars and
separated by houses. In these knots there are the spontaneous and temporary actions which bring to their use with
absolutely variable ways and time”, Navarra, Marco, (a cura di), Repairing cities, Siracusa, LetteraVentidue edizioni, 2008,
p.14
the countryside close to Milan, which serves both residential and work purposes. In Milan we may find “a city within a city”\(^1\) made up of these hidden places: some are unknown even if located on main urban pathways, other are invisible because they are located in an urban “backstage”. They may be classified as those that have a cultural heritage value (material or immaterial) and as those that have potential to be explored and valued in a community. Public university campuses are included in this latter category. Even if they are used by a specific kind of user (people who study or work there) and are perceived by other people as a private area (belonging to university); in most cases, however, campus spaces are public. According to Zukin (Zukin, 1995) “public spaces are important because they are places where strangers mingle freely” and since “metropolitan universities offer the possibility of creating a dialogue across the difference that largely defines metropolitan life in our time” (Bender, 1998) we may consider the campus located in the Bovisa area in Milan as an example of how this dialogue could be developed by merging the neighborhood and the academic staff. The crucial location of this campus is described in the next paragraph where a strong connection among spaces, buildings and communities emerge.

2.1 The Milano Bovisa Durando campus

Bovisa is an ex-industrial district. In the second half of the 20\(^{th}\) century it was subject to great change due to the removal of almost all the industries. The district was left with many abandoned areas that were soon to become a problem for the residents as they attracted homeless people, drug dealers etc. The quarter had lost its main reason of existence and did not initially transform into a suitable residential area with appropriate public spaces. The population has become more and more mixed as immigrants came to the district. Various re-construction projects slowly began in the area and the biggest one was the creation of two university campuses for the Politecnico di Milano, Milano Bovisa Durando and Milano Bovisa La. The arrival of Politecnico di Milano in the Bovisa area changed the district again, bringing in young students and commercial activities related to them. The new life of the neighbourhood has indeed brought an improvement of public transportation and the building of new residential areas, but public spaces like green areas or squares with street furniture are still missing. The Milano Bovisa Durando campus, hosting the School of Design, was built at the end of the 90s on the grounds of “Ceretti & Tanfani”, a long-established company that had produced cable railways and had made Bovisa a working class district. The place is part of the historical memory of the local inhabitants. Today it is a green space with places to sit as well as a cafe. In spring and summer many students sit outside, enjoy the sun and doing outdoor activities. It is a hidden public space since no one beside the university community uses it as such. The campus remains an “island for students” and most of the people who once knew the place as a former industry did not even have the opportunity to see how it has transformed. The two types of ‘users’ (university community and the local

\(^1\) The hidden Milano is now at the centre of a tourist promotion activity by the city council. It is described in detail at www.turismo.milano.it
residents) have very few contact points in common. The potential for improvement the campus could have offered is huge, but unfortunately it has not been fulfilled.

3. Hidden public space and design education experiment

Following the premises described in the previous paragraph, as a research team dealing with design for social innovation, we started to investigate how this hidden public space could have been opened up by the university community (students/designers/staff) to create extra space in the everyday life of permanent residents. To answer this question we tested a design education experiment based on user/community centered design, using co-design methods and creating a deep immersive experience in the neighborhood for postgraduate students. We embraced the theory of designers as solution-developers for people to one that allows people to design by and for themselves (Brown, 2009) asking the students to open a dialogue with the local community, with associations or informal groups. In 2011, when we established a workshop at the School of Design this offer was addressed to postgraduate students from MSc Interior, Communication. Fashion, Product Service System and Product Design. This created an intra-disciplinary class that was useful to merge skills, competences and approaches since the students were working in teams. It was the first time that a course with a strong connection with the neighbourhood and with a deep in-the-field immersion was held at the School of Design. At the same time, a Polisocial programme was starting: a programme for university social responsibility. Polisocial aims to place the university in close contact with the dynamics of change in society, extending the university’s mission to social issues and needs that arise from the region, on both a local and global level. Polisocial promotes and encourages new multidisciplinary approaches in human and social development, developing training opportunities and opportunities for exchange and research offered to students, researchers, and the university’s teaching and technical-administrative staff. “The goal is to foster a responsible attitude and to develop skills, expertise and new values, in future generations of professionals and citizens, increasingly more aware and prepared to handle ethical challenges” ¹.

3.1 Methodology

A Participatory Action Research (PAR) was used to define the workshop activities. At the heart of this process is five-day workshop for design students ending in a one-day event to test the ideas immediately. Since a prototype can not only be viewed as a thing (an object) (Anders et al., 2011) but also as socio-material relations where matters of concerns can be dealt with (Björgvinsson et al 2010), we encouraged the students to work on both these features. That is why the prototyping action was connected to an event where not only product/spaces/service are shown and but where relations take place helped by the use of toolkits. The toolkits are made to be used directly by the end users, thus empowering them to develop certain actions or to achieve specific goals. This kind of fast, small design

¹ http://www.polisocial.polimi.it/it/home/

3411
experiments allowed us to reach quick conclusions and continue towards more stable and organized solutions (Fassi, Meroni, Simeone, 2013). Our PAR process was organized in this way:

![PAR Model](image)

The research began with a preliminary study of available literature about conventional and non-conventional public spaces. Through this, a definition of hidden public spaces was made available (see above). The Campus Bovisa area was then chosen in order to generate an applied activity on the topic. The second part of the preliminary research is context-related and included the definition of personas and the mapping of the area’s social places.

### 3.3 Mapping of the social/public places of Bovisa

An immersion took place in the social/public places of Bovisa, including schools, local associations, public services, libraries, parks etc. From this mapping it became clear that public areas that involve the whole community are missing and the existing social places are related to specific communities and are semi-private. Some of the hypotheses previously formulated were confirmed by this phase of the research: the Milano Bovisa Durando campus is not considered a public space for the residents and there is a vast interest in having more space available for age- and culture-crossing activities. Also, the campus is very intriguing for the people and most of them, especially the retired people, expressed a need and real curiosity in seeing what Politecnico di Milano is and how it uses those areas. Most of the new local shops that were opened after the arrival of Politecnico di Milano are used by the university community and experience a loss of customers at weekends when there are no activities in the campus.

The research and mapping brought a definition of the brief to the student workshop. The students were asked to:

- develop ideas for collaborative services on the campus area for local residents
- design a toolkit to enable people to participate in/initiate the services
Hidden public spaces: when a university campus becomes a place for communities

- test part of the toolkit or prototype the service where needed, in the one-day event scheduled after the workshop.
- let the people do social activities in a “design context” (i.e. School of Design spaces of the campus)

A few more specific topics emerged from the first part of the research: 1) the lack of green spaces and the relationship with nature, 2) the absence of a cultural heritage related to everyday spaces 3) the desire for a sense of community and the need for dedicated spaces, and 4) a constant need to re-vitalize the neighborhood from a cultural point of view. These results produced four topics that were presented to the students by the tutors as part of the brief:

- Food: green spaces, contact with nature, cooking
- Places: local cultural heritage valorisation, explanation of Politecnico di Milano facilities
- Free time: public sport facilities or spaces, spaces for group activities
- Entertainment: events, exhibition, open air activities.

4. The workshop

4.1 Concept generation for services, concept development:
42 international students joined the workshop as an elective course on the MSc Product Service System. Students were asked to split in teams and work on one of the four topics assigned. One team focused on managing Saturday morning events, including communication strategy, fund-raising to produce toolkits, logistic issues and promotion/advertising to guarantee an adequate number of people would attend. On Wednesday the event-managing team went to the local market to promote the Saturday event through a flash-mob that focused on the idea of providing a chair for people to come and sit with them to have a chat in a public space. It was a way of letting local people know that a “hidden place” was asking to be discovered. During the week the same team went to the mapped schools to advertise the event to the children and to their parents/grandparents at the end of the school day to spread the word. Small groups of students worked on concept generation for the first two days and then moved on to the development of the project and the production of the “material” outputs included in the toolkits. Five concepts were presented according to the topics suggested and the “personas” identified. Workshops with children, gardening, tours of the campus, and light sports activities were some of the visions designed by the students that received detailed feedback in a session where students and tutors were to produce five projects to be developed in the following three days, which would then be presented at “C’è spazio per tutti/There’s room for one more” event. During

1 Short movie about the flash-mob can be viewed at http://www.youtube.com/watch?v=PzyhIXTBhDB
the second part of the week there was a huge effort by the students to get in contact with local shops for the supply of raw materials that would useful to the projects.

Five toolkits were designed for the five outputs of the workshop:

- “C’è giardino per tutti/There’s a garden for everyone”: to create a urban garden for the area in the green spaces of the campus. A community garden inside the Politecnico campus would enable people to create a community, enhancing trans-generational exchange and promoting a sustainable lifestyle.

![Figure 2 “C’è giardino per tutti” toolkit](image)

- “Il mio taccuino/My notebook”: to introduce the natural part of the campus to children through collecting leaves, drawing and using the “frottage” technique. The main purpose is to let children understand what the design process is through a series of guided exercises inspired by our activities. As well as new techniques, the children will learn how to discover new places and know more about specific contexts by using a different approach.
Hidden public spaces: when a university campus becomes a place for communities

Figure 3 Il Mio taccuino toolkit

- “Piccoli cuochi/Little cooks”: to apply the design process to cooking according to Enzo Mari’s theories, involving children. It encourages people to get to know each other and collaborate while being engaged in a cooking process which reflects the design method. The toolkit includes: 20 cards – ingredients, 20 cards - cooking utensils, 1 instruction card with rules of the game, 1 method card with recipe.

- “Poli-tour”: to discover the past and present of the campus, through some traces left by the former factory “Ceretti&Tanfani” and discovering the facilities of Politecnico di Milano. The toolkit is made up of 6 elements: a map including clues to find the path of the quest; information postcards and photo panels, providing information about the past history and the present of the campus, the red chair where people would sit and have a picture taken in the campus context.

- "Peter e Gisella": to reclaim the public space through light sports activities linked to campus areas (fig. 4). The toolkit includes 7 illustrative boards, which can be printed to create different areas where participants do different healthy activities, magenta stickers to indicate where the activities take place, and moustache stickers for the laughing activity. Users can also add new activities to customize it to their own wishes.
4.2 Prototyping of service ideas

Some guidelines have been followed to prototype the toolkits to guarantee scientific results. First: the toolkits had to present as a physical output including the rules and tools to be used. Second: the toolkits had to be produced in a series of fifteen items (as a minimum) to allow appropriate sufficient number of people to be involved in testing them. Third: three to four facilitators had to be present to help users engage with the toolkit and use it. Fourth: the facilitators had to collect feedback directly (through an informal conversation with the users) and indirectly (through observation of the interaction between users and toolkits). Fifth: every activity had to be recorded through pictures and/or movies.

When the gates opened a reception desk was placed at the main entrance and the event managing team was in charge of welcoming the people and explaining the project. People of the neighborhood were invited to use the space (often for the first time) as a public space and they were given a map of the campus, including where they could find the toolkit to be tested.
4.3 Feedback.
200 people entered the campus that day and the general feedback was positive. Feedback was collected by interviews, surveys and active observation on the day. The surveys/interviews asked mainly:

- if people could see themselves coming more frequently to the campus to use it for their own activities or enjoying the activities provided
- their opinion about the one-day event and the individual activities
- their wishes for future events in the campus

Active observation, including taking photographs and filming, was important in understanding different behaviours. The students could immediately understand if there was something in their project that needed modifying and some did it on the same day to have immediate results. Others took notes for a future design of the project. ¹

5. Analysis and road map design
The feedback was analysed into points of strength and weaknesses (as described below). In order to achieve continuity and arrive at a repeatable model we designed a road map for future steps.

5.1 Results
The overall results of the research have shown:

- Interest by the people to discover the campus as it is today. Many of the visitors knew the place in it former use and during this event had the chance to see it for the first time as a university campus. Elderly people were very keen to see the transformation and tell the students about what used to be there before, having a real wish to strengthen their memories.

- Understanding by the people of the new opportunities offered by the space (how they can use them). Entering the campus and participating in the initiative made people understand how they can use the space on an everyday basis. Many people showed interest in coming there with children to enjoy being in the open air or ride bicycles because the space is well-protected. Also, people involved in local associations were interested in initiating their own activities in the space. A group of neighbors was interested in maintaining the vegetable garden and creating a new green space for the neighborhood, as they do not own a private one.

- A better understanding of the local context by the university community. The event allowed the university community to know more about the context (and not only the limited places where they have lessons)

¹ A short movie about “C’è spazio per tutti/There’s room for one more” made by the event managing student team is available at http://www.youtube.com/watch?v=atvk7kw5_lc&feature=related
• Offering a mixed space for several categories of users. The Bovisa campus space was transformed by the designed toolkits into a multi-user space with very different activities. The people participating noticed this and the feedback was very positive.

• Generating new economic dynamics among local shops, citizens and students. The fund-raising done by the students among the local commercial activities allowed them to become acquainted with the economic (and not only social) potential of the event. Those who understood the potential of collaborating with the university showed great interest, and availability and connections were made for future projects.

• Limited time of the event. 3.5 hours is a rather limited time for an event. On one side it allowed us to achieve a good level of results and tests but, on the other, it could have been longer and lasted for the whole day so as to not only get in touch with the “morning” users of the area but also with the “afternoon/evening” ones.

• Campus boundaries. Politecnico di Milano campus has physical gates that are perceived by residents as a barrier. This created some difficulties during the event, because, even if they were open and advertised as the entrance, they were still perceived as a restriction to accessibility.

6. Follow up and discussion

6.1 Follow up

The need for spaces for the community in the city was confirmed by our PAR. According to certain targets set in the goals, the results of the “C’è spazio per tutti” workshop and event have generated scenarios that could be systematized to give the prototyped solutions a temporal continuity and interaction by generating new solutions for integration with the space. The time pattern in which the research/action was set, has been effective because there was an area of direct consciousness as to the failure or success of the project. The workshop, thanks to the Masters level students, a good mix of background and skills of the team members, and to rhythm and aims set during the initial phase, was a research method with a high level of instantaneous experimentation generating ideas to be put into effect. It soon brought results thanks to a rapid phase of development.

The hidden place started to be discovered by the neighbourhood. The depth of existing boundaries between the university area and Bovisa was decreasing through word of mouth and signals left on the campus as a memory of the event.

“C’è spazio per tutti” gave rise to several subsequent initiatives. The format we used was so successful, both in terms of the quality of the solutions and of the number of citizens involved, that we decided to use it as a model to be repeated. In October 2012, we organized a second version, where we proposed ten different design activities with the result of opening up the campus to more people.
In 2013, the name and format changed due to a systemization through a Masters thesis in Product Service System Design\(^1\). In March there was the first “Il Sabato della Bovisa” (Bovisa Social Saturdays) to further underline the context of the Bovisa district, where it takes place. In that year the event became a monthly appointment for the campus by a regular involvement of the local associations to gather more people. The format was repeated for five months (from March to July 2013) with four main activities focusing on book sharing, children’s games, gardening and light sports activities. It was then held twice in 2014 and in March 2015, where it was doubled (over two different days) and took place not only in the Bovisa campus but also in another hidden public space of the neighborhood (called Bovisasca).

6.2 Discussion

The main characteristics of this format are, first of all, the relationship between the campus and its neighborhood, and then the focus of the projects: all are toolkits designed by the students with and for a local association; and again, the temporary nature of the format. The success of these events can be seen by their numbers: from 250 visitors in the first edition in 2012 to 750 in March 2014. This underlines the results of making a hidden public space more visible to a larger number of people by using design actions.

This result is not only connected to the individual events but it also has a long-term application. One of the projects designed for the first event (C’è giardino per tutti) was carried forward and became a permanent project: Coltivando - L’orto conviviale al Politecnico di Milano (Coltivando - The convivial garden at the Politecnico di Milano).

Coltivando was the result of a deep research on the urban agriculture topic within a public space and of a co-design process, lasting four months, which brought people back to the university campus more regularly by involving them in continuous activities (set-up, maintenance, etc.) in the garden. Coltivando was founded in October 2012 by a group of professors, researchers, and graduates of the Department of Design, and the School of Design of the Politecnico di Milano. Its main objective is, again, to connect two spatial and social entities that co-exist but do not connect with each other through conversation: the Durando university campus, established at the end of the 1990s, and the surrounding neighborhood of Bovisa. After more than two years, the garden is a thriving hub of community activity, and is considered a success. The team of organizers is made up of 15-20 participants from the neighborhood.

These two initiatives, a temporary event and a permanent community garden, generated awareness in the local neighborhood of the role of the campus and the university. But how could these projects become economically sustainable and/or adapted in other similar contexts?

This question is at the core of “campUS” – Incubation and Settings for Social Practices”, a funded research project financed by the “Polisocial Award”, a prize that awards social

---

\(^1\) Roberta Motter, Il Sabato della Bovisa, MSc Product Service System Design thesis, Politecnico di Milano, 2013
innovation research projects within Politecnico di Milano. The project encompasses four different initiatives: the drawing up of guidelines for the design and the realization of urban community gardens, a neighborhood social TV network, a traveling pavilion to host the activities of the local associations; and the study of the economic sustainability of the three preceding initiatives. This research project is currently ongoing and underlines how the role of the designer as activator can enable people to live and use spaces on their own. The expected results at the end of the project (October 2016) will be a model of economic sustainability that will allow the outputs (community garden, social TV and traveling pavilion) to continue for a longer time.

Acknowledgements: We would like to thank the students, the associations and the local municipality who helped us to develop the outputs.

“Over fifty years the Design Research Society has been fundamental to developing and supporting the field of Design Research. In that time many influential and innovative conferences have been held and the 50th Anniversary in Brighton conference continues that tradition. The breadth and depth of design research represented in these proceedings is extremely impressive and shows, I think, not only how important design research has become, but also the considerable potential that it holds for the future.”
